February 2023

Executive summary

The South Taranaki District Council (STDC) operates a total of ten water treatment plants (WTPs) throughout the district. Supplying municipal water supply to the district's towns and water to the rural communities.

This report for the period July 2021 to June 2022 describes the monitoring programme implemented by the Taranaki Regional Council (the Council) to assess STDC's environmental and consent compliance performance during the period under review. The report also details the results of the monitoring undertaken and assesses the environmental effects of STDC's activities.

During the monitoring period, STDC demonstrated a good level of environmental performance and high level of administrative performance.

STDC holds 33 resource consents which include 307 conditions setting out the requirements that must be satisfied. STDC holds 15 consents to take water, ten consents to discharge to both land and water, and eight consents to construct and maintain in-stream structures.

The Council's monitoring programme for the year under review included ten inspections, the collection of six water samples for physicochemical analysis, three biomonitoring surveys of receiving water, and two fish surveys. Abstraction, stream flow and discharge data, provided by the consent holder, was analysed and reviewed.

Discharge quantity data showed that STDC were non-compliant for discharge volumes at both the Opunake and Waimate West WTPs, with ongoing discussions occurring between Council and STDC. Enforcement action will likely occur in relation to these breaches and will be reported on in the 2022-2023 report.

Chemical sampling of discharges and receiving waters and macroinvertebrate surveys indicated that the water supply schemes were not causing any adverse environmental effects. A fish survey in the Kapuni Stream and Mangawhero Stream found no evidence that the weir structures presented a barrier to fish passage.

By comparison with previous years, the monitoring indicated that STDC had a decline in their performance in terms of discharge volumes to water at the Opunake and Waimate West WTP's.

For reference, in the 2021-2022 year, consent holders were found to achieve a high level of environmental performance and compliance for 88% of the consents monitored through the Taranaki tailored monitoring programmes, while for another 10% of the consents, a good level of environmental performance and compliance was achieved.

In terms of overall environmental and compliance performance by the consent holder over the last several years, this report shows that the consent holder's performance remains at a good - high level.

This report includes recommendations for the 2022-2023 year, including a recommendation relating to an optional review of consents 0989-3, 1811-4, 3770-3, 3927-3, 3928-3, 4826-3, 5365-32 5451-2 and 5452-2 in June 2023.

1 Introduction

1.1 Compliance monitoring programme reports and the Resource Management Act 1991

1.1.1 Introduction

This report is for the period July 2021 to June 2022 by the Taranaki Regional Council (the Council) on the monitoring programme associated with resource consents for ten water treatment plants (WTPs) operated by the South Taranaki District Council (STDC).

The report includes the results and findings of the monitoring programme implemented by the Council in respect of the consents held by STDC, that relate to abstractions and discharges of water, and in-stream structures.

One of the intents of the *Resource Management Act 1991* (RMA) is that environmental management should be integrated across all media, so that a consent holder's use of water, air, and land should be considered from a single comprehensive environmental perspective. Accordingly, the Council generally implements integrated environmental monitoring programmes and reports the results of the programmes jointly. This report discusses the environmental effects of STDC's use of water, land and air, and is the 24th combined annual report by the Council for STDC in relation to their water supply schemes.

1.1.2 Structure of this report

Section 1 of this report is a background section. It sets out general information about:

- consent compliance monitoring under the RMA and the Council's obligations;
- the Council's approach to monitoring sites through annual programmes;
- the resource consents held in relation to the WTPs;
- the nature of the monitoring programme in place for the period under review; and
- a description of the activities and operations conducted at each of STDC's sites.

Section 2 presents the results of monitoring during the period under review, including scientific and technical data.

Section 3 discusses the results, their interpretations, and their significance for the environment.

Section 4 presents recommendations to be implemented in the 2022-2023 monitoring year.

A glossary of common abbreviations and scientific terms, and a bibliography, are presented at the end of the report.

1.1.3 The Resource Management Act 1991 and monitoring

The RMA primarily addresses environmental 'effects' which are defined as positive or adverse, temporary or permanent, past, present or future, or cumulative. Effects may arise in relation to:

- a. the neighbourhood or the wider community around an activity, and may include cultural and social-economic effects;
- b. physical effects on the locality, including landscape, amenity and visual effects;
- c. ecosystems, including effects on plants, animals, or habitats, whether aquatic or terrestrial;
- d. natural and physical resources having special significance (for example recreational, cultural, or aesthetic); and

e. risks to the neighbourhood or environment.

In drafting and reviewing conditions on discharge permits, and in implementing monitoring programmes, the Council is recognising the comprehensive meaning of 'effects' in as much as is appropriate for each activity. Monitoring programmes are not only based on existing permit conditions, but also on the obligations of the RMA to assess the effects of the exercise of consents. In accordance with Section 35 of the RMA, the Council undertakes compliance monitoring for consents and rules in regional plans, and maintains an overview of the performance of resource users and consent holders. Compliance monitoring, including both activity and impact monitoring, enables the Council to continually re-evaluate its approach and that of consent holders to resource management and, ultimately, through the refinement of methods and considered responsible resource utilisation, to move closer to achieving sustainable development of the region's resources.

1.1.4 Evaluation of environmental and administrative performance

Besides discussing the various details of the performance and extent of compliance by the consent holders, this report also assigns a rating as to each Company's environmental and administrative performance during the period under review. The rating categories are high, good, improvement required and poor for both environmental and administrative performance. The interpretations for these ratings are found in Appendix II.

For reference, in the 2021-2022 year, consent holders were found to achieve a high level of environmental performance and compliance for 88% of the consents monitored through the Taranaki tailored monitoring programmes, while for another 10% of the consents, a good level of environmental performance and compliance was achieved.¹

1.2 Resource consents

STDC holds various resource consents including water abstraction permits, discharge permits and land use consents for various water supply plants and structures that they operate. These resource consents are listed in Table 1 and their locations are shown in Figures 1 and 2. Copies of all resource consents held in relation to water supply plants and structures in the South Taranaki District are included in Appendix I.

on Council has used these compliance grading criteria for more than 18 years. They ali

¹ The Council has used these compliance grading criteria for more than 18 years. They align closely with the 4 compliance grades in the MfE Best Practice Guidelines for Compliance, Monitoring and Enforcement, 2018

Table 1 South Taranaki water supplies resource consents and processes

Water Supply Scheme	Consent No	Description	Expiry Date	Next Review Date	Process
	0213-4	To take and use water from the Waingongoro River for municipal water supply purposes	1 June 2035	June 2024	Raw water is abstracted via a screened intake gallery located on the bank of a pool in the river and piped to the water treatment plant. Polyaluminium chloride (PAC) is added and the
Eltham WTP	0989-3	To discharge reservoir contents from the Eltham Water Supply Reservoir onto land adjacent to the Waingongoro River	1 June 2029	June 2023	water passes through a clarifier and sand filters. The water is pH buffered (sodium bicarbonate) and chlorinated. Backwash from the filters is discharged via one
	1811-4	To discharge filter backwash from the Eltham WTP via a settling pond into an unnamed tributary of the Waingongoro River	1 June 2035	June 2023	of two settling ponds to a drain which flows to an unnamed tributary of the Waingongoro River. This scheme services both domestic and industrial users in Eltham.
	0146-2	To take and use water from the Kapuni Stream for municipal water supply purposes	Expired- Section 124 protection	-	Raw water is abstracted from the Kapuni Stream via a screened intake structure and gravity fed to the WTP. It passes through grit
	0933-3	To discharge up to 227 m ³ /day of settling pond supernatant from a WTP into the Kapuni Stream	1 June 2023	-	tanks and flocculant is added before it goes into a flocculation tank. It then is pumped through strainers before going through the
Hawera water supply (Kapuni WTP)	7002-1	To take and use up to 4,320 m³/day of groundwater at a maximum rate of 50 l/s as a combined total from up to three water bores in a bore field at the Kapuni reservoir site for municipal, rural, industrial, and recreational supply purposes	1 June 2023	-	membrane filters. The water is pH adjusted using caustic soda, chlorinated, and fluoride is added before going to the site reservoirs. Membrane backwash water is discharged via two settling ponds to the Kapuni Stream. The
	7413-1	To erect, use and maintain a water intake structure on the bed of the Kapuni Stream, including temporary damming and diversion during construction	1 June 2023	-	discharge water is de-chlorinated and pH adjusted before it goes to the ponds. This scheme supplies water to Hawera, as well as Normanby, and Ohawe. It also supplies water
	7446-1	To discharge membrane backwash water and cleaning wastewater from the Kapuni WTP into the Kapuni Stream	1 June 2023	-	to rural users and to industry.

Water Supply Scheme	Consent No	Description	Expiry Date	Next Review Date	Process	
	7447-1	To install, use and maintain an outfall structure on the bank of the Kapuni Stream for the Kapuni WTP	1 June 2023	-		
	1185-3.1	To take water from the Mangatoki Stream in the Waingongoro catchment for Inaha rural water supply purposes	1 June 2023	-	Raw water is abstracted from two intake structures (weirs) on the Mangatoki Stream and a single intake on the Waingongoro River. Water is gravity fed and pumped to a settling	
	1186-3.0	To take water from the Waingongoro River for Inaha rural water supply purposes	1 June 2023	-	pond and then to the treatment plant. PAC is added and the water is passed through two sand filters. The water is pH buffered (sodium	
Inaha WTP	3927-3.0	To discharge backwash wastewater from the Inaha Rural WTP into an unnamed tributary of the Mangatoki Stream	1 June 2035	June 2023	bicarbonate) and chlorinated. Filter backwash is discharged to a small settling pond, then to an unnamed tributary of the Mangatoki Stream via a natural pond. This	
mana win	3928-3.0	To discharge uncontaminated overflow water from the Inaha Rural Water Supply Treatment Plant via a settlement pond into an unnamed tributary of the Mangatoki Stream	1 June 2035	June 2023	schemes supplies water to rural users from Kaponga across to Eltham and down to Matapu and Te Roti.	
	4102-2	To maintain an existing low-level weir and fish pass across the Mangatoki Stream in the Waingongoro catchment	1 June 2023	-		
	5365-2.0	To dam water and use a low level intake weir in the Mangatoki Stream for Inaha rural water supply scheme purposes	1 June 2035	June 2023		
Opunake WTP	0232-4	To take and use water from the Waiaua River for Opunake town water supply purposes	1 June 2030	June 2024	Water is abstracted via a submerged screened intake structure and is pumped to the adjacent WTP where it is membrane filtered and	
F	5574-2	To discharge water treatment residuals, and pond drainage water from the Opunake WTP into the Waiaua River	1 June 2030	June 2024	chlorinated. This scheme supplies water to the Opunake township and approximately 22 rural users.	

Water Supply Scheme	Consent No	Description	Expiry Date	Next Review Date	Process
	9473-1	To construct, place and use a water intake structure on the bed of the Waiaua River for water abstraction purposes	1 June 2030	June 2024	
Patea Water Supply	3388-3.1	To take and use groundwater from three bores (known as Bore 1, Bore 4 and Bore 5) for Patea Township water supply purposes	1 June 2028	-	Groundwater is pumped from bores 1, 4 and 5 and then sent to reticulation. There is an option to chlorinate the water if necessary. This schemes supplies water to the Patea township.
Rahotu WTP	3696-3	To take and use water from the Pungaereere Stream for the Rahotu community water supply	1 June 2031	June 2025	Raw water is abstracted through two pumps via a screened intake structure from a pool in the Pungaereere Stream to an adjacent settling tank, where PAC is added. Water is gravity fed from the settling tank to a pressure sand filter.
	6038-2	To discharge filter backwash water and settling tank waste from the Rahotu WTP into the Pungaereere Stream	1 June 2037	June 2025	Filtered water is then chlorinated Water is stored in two 100 m ³ reservoirs to supply the Rahotu township, rural users and local industry.
Wai-inu Beach Supply	3770-3	To take and use groundwater for Wai-inu Beach water supply purposes	1 June 2028	-	Groundwater is pumped from a bore, chlorinated and UV treated, and then pumped to 6 reservoirs which have storage capacity of 125 m³. The scheme is used for low pressure domestic, limited watering and firefighting.
Waimate West WTP	0129-3.2	To discharge treated wash water from the Waimate West water supply scheme into an unnamed tributary of Kelly's Creek	1 June 2023	-	Raw water is abstracted from the Otakeho Stream and piped directly to the Waimate West WTP. This take is the primary source of
	0634-3	To take water from the Mangawhero-iti Stream for the Waimate West water supply	1 June 2023	-	water for this scheme. Raw water is also diverted from the Mangawhero Stream into the Mangawhero-iti Stream. Water is then
	0635-3	To take water from the Mangawhero Stream for the purpose of adding to the flow of the Mangawhero-iti Stream and providing water for the Waimate West water supply	1 June 2023	-	abstracted from the Mangawhero-iti Stream and gravity fed to the WTP. When sufficient water can be abstracted from the Otakeho and Mangawhero-iti streams in the scheme and

Water Supply Scheme	Consent No	Description	Expiry Date	Next Review Date	Process
	10370-1.0	To take and use groundwater for Waimate West water supply purposes	1 June 2035	June 2023	still provide for sufficient flows downstream, water from the Mangawhero Stream is avoided
	3911-3.0	To take and use water from the Otakeho Stream for the Pope and Waimate West water supply schemes	1 June 2023	-	due to its turbidity. PACL and flocculant are added and the water passes through a clarifier and sand filters. The
	4446-2	To discharge treated backwash water from the Pope Rural Water Supply Treatment Plant into an unnamed tributary of the Mangawhero Stream in the Kaupokonui catchment	1 June 2023	-	water is pH buffered (soda ash) and chlorinated (chlorine gas). On average the clarifier is bled every six hours and each of the four filters are backwashed once per day. Clarifier bleed and filter
	4826-3.0	To dam water and use a weir and water intake structure on the bed of the Otakeho Stream	1 June 2035	June 2023	backwash are discharged via one of two settling ponds to an unnamed tributary of the
	5451-2.0	To dam water and use a water intake structure on the bed of the Mangawhero-iti Stream for water abstraction purposes	1 June 2035	June 2023	Mangawhero-iti Stream. A groundwater bore has been commissioned to top up supply during periods of peak
	5452-2.0	To dam water and use a weir, a water intake structure and a swing bridge on/over the bed of the Mangawhero Stream for water abstraction	1 June 2035	June 2023	demand and stream low flow restrictions. This scheme supplies water to the Kaponga and Manaia townships and approximately 815 rural users.
Waverley Water Supply	3313-3	To take and use groundwater from the "Fookes Street" bore (GND0244), the "Chester Street" bore (GND0059) and the "Swinbourne Street" bore (GND2242) for municipal water supply purposes at Waverley	Expired- Section 124 protection	-	Groundwater is pumped from the bores, which tap a confined aquifer in the Whenuakura formation. The water passes through a sand trap, and is then fluoridated, gas chlorinated and UV treated prior to entering the reservoirs for distribution. The water is then supplied via a gravity main to the distribution system and consumers in the town.
Waverley Beach	9563-1	To take and use groundwater for Waverley Beach water supply purposes	1 June 2028	-	Groundwater is pumped from a bore to a reservoir for distribution. It is not chlorinated.

Figure 2 Location of STDC's southern consents

1.3 Monitoring programme

1.3.1 Introduction

Section 35 of the RMA sets obligations upon the Council to gather information, monitor and conduct research on the exercise of resource consents within the Taranaki region. The Council is also required to assess the effects arising from the exercising of these consents and report upon them.

The Council may therefore make and record measurements of physical and chemical parameters, take samples for analysis, carry out surveys and inspections, conduct investigations and seek information from consent holders.

The monitoring programme for the STDC water supply schemes consisted of eight primary components.

1.3.2 Programme liaison and management

There is generally a significant investment of time and resources by the Council in:

- ongoing liaison with resource consent holders over consent conditions and their interpretation and application;
- discussion over monitoring requirements;
- preparation for any consent reviews, renewals or new consent applications;
- advice on the Council's environmental management strategies and content of regional plans; and
- consultation on associated matters.

1.3.3 Site inspections

A total of ten inspections were undertaken. The inspections focussed on intake structures, fish passage, water metering, abstraction rates and plant discharges.

1.3.4 Chemical sampling – discharge monitoring

The Council undertook receiving water samples and sampling of discharges, to audit check STDC's sampling from the Kapuni, Inaha, and Waimate West WTPs.

1.3.5 Review of discharge quality data

STDC provided discharge sampling data to the Council throughout the monitoring year. This was reviewed by Council staff to ensure contaminant concentrations complied with consent conditions.

1.3.6 Biomonitoring and fish surveys

Macroinvertebrate surveys were undertaken in relation to the Hawera, Rahotu, and Waimate West WTPs to determine effects upon the stream communities due to the discharge of filter backwash and/or abstractions. A fish survey was undertaken in relation to the Hawera and Waimate West WTP's to assess whether the weir intake structures restricted fish passage.

1.3.7 Review of abstraction data

STDC provided abstraction data to the Council throughout the monitoring year. This was reviewed by Council staff to ensure abstraction volumes and rates complied with consent conditions.

1.3.8 Hydrological monitoring

Hydrological monitoring was undertaken in relation to the Hawera, Eltham, Rahotu and Waimate West WTP's in order to check flows and maintain ratings curves. Data review of the groundwater level data recorded by STDC was also undertaken.

1.3.9 Review of reports required by consents

Water conservation and leak detection reports are required by a number of the water take consents held by STDC. These are reviewed to ensure that the consent holder is using water efficiently, detecting and minimising leaks and enforcing conservation measures to minimise water use in times of high demand.

2 Results

2.1 Water

2.1.1 Inspections

An annual inspection of Hawera, Patea, Wai-inu, Waverley and Waverley Beach WTPs was conducted on 17 February 2022. An inspection of Eltham, Inaha and Waimate West WTPs was conducted on 15 June 2022. Inspections of the Opunake and Rahotu WTPs were conducted on 16 June 2022.

17 February 2022

Kapuni WTP – Hawera Water Supply

The intake weir and fish pass was inspected, with moderate flows that were clear and uncoloured flowing unobstructed over the weir and through the fish pass. The fish pass remained in good condition, but it was noted that some bank scouring had occurred on the left bank downstream of the weir due to the recent flooding events. Remedial work was being undertaken at the time of the inspection, placing boulders upstream of the sampling site. The water abstraction at the time was 400 m³/hr, which was well within consented limits. The groundwater bore was not in service.

Discharge from the backwash settling ponds was estimated at 5-7 L/s. The southern backwash lagoon was isolated and empty. Samples were taken from above and below the receiving waters, and included a backwash discharge sample.

Patea Water Supply

The three Patea bores currently used were inspected with no issues noted. Bore 4 is the main source of water and this was abstracting at a rate of 34 m³/hr at the time of the inspection. Bore 1 and Bore 5 were not operating at the time.

Wai-inu Beach WTP

The bore and reservoir tanks were inspected, with no concerns noted. Water was being abstracted at a rate of 5.8 m³/hr and the reservoir tanks were 93% full.

Waverley Water Supply

The Swinbourne Street bore was abstracting at the rate of 31 m³/hr at the time of the inspection, which was in compliance with consent conditions. The Chester Street and Fookes Street bores were not operating.

Waverley Beach Water Supply

An inspection of the WTP and the existing bore, which is exercised under the permitted take rule, were found to be ok. Abstraction at the time of the inspection was $1.3 \text{ m}^3/\text{hr}$.

15 June 2022

Eltham WTP

The intake from the river was in a good condition and a new screen had been installed. The water was clear and uncoloured with moderate to high flow conditions. The abstraction at the time of the inspection was 178.2 m³/hr and the reservoir was at 72.7% capacity. No issues were noted around the plant.

Inaha WTP

There are two intake weirs on the Mangatoki Stream that were inspected, with water flowing freely over the weirs and fish passes. The intakes were screened and were cleared by STDC staff during the inspection. Water was clear and uncoloured, with an abstraction rate of 28 m³/hr. The Waingongoro intake screen was

clear, and water abstraction was 101 m³/hr. At the WTP, the top settling pond was full of water and sediment, with the bottom pond having clearer water, with the sediment having settled out. The backwash settling pond was discharging at the time and a sample was taken by Council staff. No issues were noted around the plant.

Waimate West WTP

The intake weir on the Mangawhero-iti Stream was open and clear of debris, with the fish pass unobscured and water flowing freely over the weir. Abstraction was occurring at 128 m³/hr. The site was in a tidy condition. The Otakeho intake was open and clear of debris. The fish pass was unobscured and water was flowing freely over the weir. The weir appeared in good condition, however past floods have caused some damage to the structure. Abstraction was occurring at 250 m³/hr. The Mangawhero intake was not being used at the time of the inspection. At the WTP, settling pond 1 was being cleared of sediment and emptied at the time of the inspection, with settling pond 2 being very full and discharging to the unnamed tributary. A discharge sample, which was clear and uncoloured, was collected at the time.

16 June 2022

Opunake WTP

A new concrete block structure had been partially built around the intake to protect the screen and intake from debris, rocks and boulders.. New erosion control measures had been installed on both banks of the Waiaua River to help stabilise banks and prevent further erosion. The river was slightly turbid, with a grey-green colour, with moderate to high flows.

Pond 1 was nearly empty and not discharging. Pond 2 was relatively full and discharging. The circular settling tank was discharging to the pond and wetland. No issues were noted. Turbidity at the time was 5.4 FNU and the treated water flow rate was 39.4 m³/hr.

Rahotu WTP

The intake had some debris but was mainly clear, with the platform for the intake in good condition. The river was clear and uncoloured. The backwash was clear and uncoloured and was discharging through a pvc pipe at a flow of approximately 2-3 L/s. The storage tanks and settling ponds were in good condition.

2.2 Results of discharge monitoring

2.2.1 Kapuni WTP

Receiving water samples were taken on one occasion, while discharge samples were taken on two occasions at the Kapuni WTP (Figure 3). The results are presented in Table 2 and Table 3.

Table 2 Kapuni WTP sample results, 3 February 2022

Parameter	Unit	Pond discharge (STW002080)	Consent limits for discharge
Free available chlorine	g/m³	< 0.07	0.1
Conductivity @ 25°C	mS/m	23.6	-
Sodium	g/m³	35	-
рН	рН	8.8	6.5 – 8.5
Suspended solids	g/m³	4	20
Temperature	Deg C	20.2	-
Turbidity	NTU	1.15	-

Table 3 Kapuni WTP sample results, 17 February 2022

Parameter	Unit	Upstream (KPN000300)	Pond discharge (STW002080)	Downstream (KPN000301)	Consent limits for discharge
Free available chlorine	g/m³	-	< 0.07	-	0.1
Conductivity @ 25°C	mS/m	11.7	21.1	11.7	-
Sodium	g/m³	9.4	29	9.5	-
рН	рН	7.4	8.8	7.4	6.5 – 8.5
Suspended solids	g/m³	-	9	-	20
Temperature	Deg C	16.2	19.4	16.5	-
Turbidity	NTU	3.5	2.6	3.0	

Although the pond discharge samples pH, for both sample runs, was above the consented limit it has been considered acceptable as it has not altered the receiving waters pH.

Figure 3 Aerial photo showing sampling site locations for the Kapuni WTP

While the consent does not limit sodium, it is of particular interest due to the use of chemicals such as sodium hypochlorite, sodium hydroxide and sodium bisulphate in the WTP process. Ballance Agri-Nutrients and Vector both have discharges that occur upstream of the WTP, which have limits placed on their consents for sodium. The WTP discharge will continue to be regularly monitored for sodium to establish whether it is making a significant contribution to sodium loadings in the Kapuni Stream.

2.2.2 Inaha WTP

A sample of the Inaha WTP filter backwash discharge was collected on one occasion during the monitoring period. The results of the sample are presented in Table 4, with the location shown in Figure 4. The results of the sample complied with the conditions of consent 3927-3.

Table 4 Inaha WTP backwash discharge sample results (STW002070), 15 June 2022

Parameter	Unit	Results	Consent limits for discharge
рН	рН	7.5	6 - 9
Suspended solids	g/m³	16	20
Temperature	Deg C	10.4	-
Turbidity	NTU	2.8	-

Figure 4 Aerial photo showing filter backwash sampling site for the Inaha WTP

2.2.3 Waimate West WTP

A sample of the Waimate West WTP filter backwash discharge was collected on one occasion during the monitoring period. The results of the sample are presented in Table 5, with the location shown in Figure 5. Due to maintenance work being carried out in one of the settling ponds at the time of the water sampling, the suspended sediment was above the consented limit as set out in the conditions for consent 0129-3.2. This is to be expected as the sludge pond was being dewatered, which the consent allows to occur, once per year, for up to 14 days.

Table 5 Waimate WTP backwash discharge sample results (STW002069), 15 June 2022

Parameter	Unit	Result	Consent limits for discharge
рН	рН	7.0	6.5 – 8.5
Suspended solids	g/m³	39	20
Temperature	Deg C	20	-
Turbidity	NTU	0.20	-

Figure 5 Aerial photo showing filter backwash sampling site for the Waimate West WTP

2.3 Discharge data review

STDC monitors the water quality of all their discharges in relation to WTPs on a monthly basis, both visually for effects on the receiving environment, and by sample analysis for concentrations of contaminants in the discharge, as required by their consent conditions. This data was reviewed and the results indicated that the monthly samples were in compliance with consent conditions (Table 6).

The Council also assesses the discharge volumes from Eltham, Opunake and Waimate West WTPs to ensure compliance with consent conditions. In the period under review, the Eltham WTP did not exercise their consent to discharge up to 5000 m³ per year of reservoir contents to land. However, review of the monitoring data for the Opunake and Waimate West WTPs indicated non-compliances with the daily discharge volumes on a significant number of occasions throughout the monitoring period (Table 7). The discharges that STDC supply, are not the actual recorded discharges, instead they are the difference between the meter that records the raw water abstracted from the stream and the meter recording the treated water that is used as the water supply. The difference between these two meters, the unused water, is the discharge. Some of these breaches are related to the cleaning of the settling ponds, which the

consents allow for. However, the majority of the Opunake WTP non-compliances are due to the headwaters of the Waiaua River having suffered erosion that has caused the river to run with a high sand sediment load. This means that STDC abstract more water than normally required, with much of the water discharged back out during the treatment process, resulting in higher than consented discharges to the river. Ongoing discussions with STDC are occurring with enforcement action being taken in the 2022-2023 monitoring period to address these breaches, which will be discussed in more detail in the 2022-2023 report. STDC has been advised to apply for a consent to increase the discharge volume allowed for the Opunake WTP and also to advise the Council of any non-compliances in a prompt manner.

Table 6 STDC's discharge self-monitoring water quality summary (Eltham, Inaha, Kapuni, Opunake, Rahotu, and Waimate West)

Water Treatment Plant	Consent number	No. of samples taken	Free available chlorine (g/m³) range	pH range	Suspended solids (g/m³) range
Eltham	1811-4	12	0	7.0 – 7.8	0.14 – 10.0
Inaha	3927-3	12	0	6.9 – 7.7	0.08 - 5.0
Kapuni	7446-1	12	0	7.0 – 8.0	0.1 – 6.4
Opunake	5574-2	12	0	7.0 – 7.8	0.1 – 8.2
Rahotu	6038-2	12	0 – 0.06	7.0 – 7.4	0.1 – 5.9
Waimate West	0129-3	12	0	7.1 – 7.6	0.2 – 8.6
Consent limits		-	0.1 g/m³	6 - 9	20 g/m³

Note: Opunake WTP has a suspended sediment consent limit of 50 g/m³

Table 7 STDC's discharge self-monitoring water quantity summary

Water Treatment Plant	Consent number	Maximum volume (m³/day)	Consented volume (m³/day)	Number days non-compliant	Compliance rate (%)
Opunake	5574-2	281	120	153	58%
Waimate West	0129-3	1601	750	35	90%

The Waimate West discharge consent expires in June 2023 so discharge limits will be addressed within the consenting process, but in the meantime, STDC have been advised that they are required to be compliant with their consent conditions. Ongoing discussions are occurring and enforcement action is likely to occur.

2.4 Results of biomonitoring

2.4.1 Macroinvertebrate surveys

The Council's 'kick-sampling' technique was used to collect streambed macroinvertebrates in order to assess the impact of the Waimate West WTP (Mangawhero-iti Stream), Hawera WTP (Kapuni Stream), and the Rahotu WTP (Pungaereere Stream).

This has provided data to assess any potential impacts the consented water abstraction and/or backwash discharges may have had on the macroinvertebrate communities of the stream. Samples were taken and processed to identify the macroinvertebrates. The number of different types of taxa counted (taxa richness), macroinvertebrate community index (MCI) and semi-quantitative macroinvertebrate community index (SQMCI_S) scores were calculated for each site.

The MCI is a measure of the overall sensitivity of the macroinvertebrate community to the effects of organic pollution in stony streams. It is based on the presence/absence of taxa with varying degrees of sensitivity to

environmental conditions. The SQMCI_S takes into account taxa abundance as well as sensitivity to pollution, and may reveal more subtle changes in communities. It may be the more appropriate index if non-organic impacts are occurring. Significant differences in either the taxa richness, MCI or the SQMCI_S between sites may indicate the degree of adverse effects (if any) caused by water abstractions.

A summary of each report is given below and copies of biomonitoring reports for these sites are available from the Council upon request.

2.4.1.1 Waimate West WTP macroinvertebrate survey (Mangawhero-iti Stream)

1 February 2022

Four sites (MWI000170, MWI000174, MWI000330 and MWI000490, sites 1 to 4 respectively) were visited to collect streambed macroinvertebrates from the Mangawhero-iti Stream in relation to STDC's Waimate West WTP (Figure 6). Numbers of taxa richness were moderate across all the four sites, however site 1 recorded the lowest number of taxa recorded for the site to date. A high proportion of 'sensitive' taxa were recorded, and all four sites were numerically dominated by 'sensitive' taxa. Three taxa were characteristic to all four sites including; one 'highly sensitive' taxon - a mayfly (*Deleatidium*), and two 'moderately sensitive' taxa - a beetle (Elmidae) and a caddisfly (*Pycnocentrodes*).

MCI scores were reflective of 'very good' macroinvertebrate health at site 1 'excellent' at site 2, and 'good' at sites 3, and 4. The MCI score of 144 units recorded at site 2 was the highest recorded for the site to date, and was significantly higher than the previous survey and the overall median for the site. The composition of macroinvertebrate communities at sites 1 and 2 reflected the relatively cool, stony nature of the stream located in the upper mid-reaches of the catchment. The MCI scores recorded at sites 1 and 2, were both reflective of healthy macroinvertebrate communities and provided evidence that water abstraction by Waimate West WTP had not had a detrimental impact on the macroinvertebrate communities at site 2. The overall decrease in MCI scores in a downstream direction between sites 1 and 4 can likely be attributed to the cumulative impact of agricultural discharges within the catchment, rather than to any affects associated with the operation of the Waimate West WTP.

SQMCI scores were reflective of 'excellent' health at sites 1, 2 and 3, and 'very good' health at site 4. The SQMCI scores recorded at sites 1 and 2 were similar to site historic medians, while sites 3 and 4 were significantly higher. SQMCI scores decreased significantly in a downstream direction, with a decline of 1.4 units recorded between sites 1 and 4, which was typical for the sites.

Overall, the results of the survey found no evidence that water abstraction from the Mangawhero-iti Stream by the Waimate West WTP had had a significant effect on the freshwater macroinvertebrate communities downstream of the abstraction point. Macroinvertebrate indices did decrease in a downstream direction between sites 1 and 4, which would most likely be due to the negative effects of agricultural discharges on the macroinvertebrate stream communities.

18

Figure 6 MCI results recorded in the Mangawhero-iti Stream in relation to the Waimate West WTP, 1 February 2022

2.4.1.2 Kapuni Stream macroinvertebrate survey (Hawera WTP)

3 February 2022

Streambed macroinvertebrates were collected from two sites (KPN000300 and KPN000301) on the Kapuni Stream to examine the effects of discharges to the stream from the Hawera WTP (Figure 7).

Moderately high taxa richness was recorded at both sites, with 25 taxa recorded at the upstream site and 26 taxa at the downstream. The upstream site recorded seven more taxa than the historic median, while the downstream site recorded four more taxa. The downstream sites taxa richness was the highest recorded to date. MCI scores categorised both sites as having 'good' macroinvertebrate community health at the time of the survey, while SQMCI scores categorised the sites as having 'excellent' macroinvertebrate community health. Taxa richness, MCI and SQMCI scores were similar to historic medians. Additionally, no significant changes in any invertebrate metric were recorded between the two sites. The macroinvertebrate communities at these two sites contained substantial proportions of 'sensitive' taxa, with 76% of the taxa found at both sites. The results were not indicative of any significant adverse impacts caused by the backwash discharge from the Hawera WTP.

Figure 7 MCI results recorded in the Kapuni Stream in relation to the Hawera WTP, 3 February 2022

2.4.1.3 Pungaereere Stream macroinvertebrate survey (Rahotu WTP)

12 April 2022

Streambed macroinvertebrates were collected from three sites (PNG000195, PNG000197 and PNG000200) on the Pungaereere Stream to examine the effects of the abstraction and discharge to the stream from the Rahotu WTP (Figure 8).

Moderate taxa richness was recorded at sites 1 and 2, with moderately low richness at site 3. All three sites had taxa richness substantially lower than their historical median and were the lowest taxa richness to date. In particular, site 3 had taxa richness 12 lower than the historical median and was ten taxa lower than its current minimum. Given that the 'control' site (site 1) also had a taxa richness five taxa lower than its previous minimum, factors other than the scheme appear to be causing the low taxa richness.

MCI scores categorised sites 1 and 3 as having 'good' macroinvertebrate community health and site 2 as having 'fair' macroinvertebrate community health. Sites 2 and 3 had MCI scores were not significantly different to site 1 and all three sites had MCI scores significantly higher than their historical medians and historical maximums. SQMCI scores categorised sites 1 and 3 as having 'very good' macroinvertebrate community health and site 2 as having 'good' macroinvertebrate community health. All SQMCI scores were similar to one another and consistent with the MCI scores, recording significantly higher than historical medians and historical maximums, indicating better than typical macroinvertebrate health.

Overall, this survey provided no evidence that the water abstraction and/or backwash discharge from the Rahotu WTP had caused any significant adverse impacts on the macroinvertebrate communities of the Pungaereere Stream.

Figure 8 MCI results recorded in the Pungaereere Stream in relation to the Rahotu WTP, 12 April 2022

2.4.2 Fish survey

During the period under review the Council undertook a fish survey in the Mangawhero Stream in relation to Waimate West WTP and Kapuni Stream in relation to the Hawera WTP. A summary of the report is given below, a copy of the full report can be obtained on request to the Council.

2.4.2.1 Mangawhero Stream – Waimate West WTP

A two site survey was undertaken in the Mangawhero Stream on 24 January 2022, in order to assess the effectiveness of the weir and fish pass (Photo 1). This survey employed the electric fishing technique.

Photo 1 STDC weir, new fish pass (right of photo) and old degraded fish pass (centre of photo) in the Mangawhero Stream 2022. A small perch out the downstream end of the ramp is present

Survey site 1 was 40 m upstream of the weir, while site 2 was 50 m downstream of the weir. The fish diversity was low at both survey sites, as has been recorded in previous surveys. Species richness was higher at the downstream site, as was fish density. It was noted, that due to poor water visibility during the survey, other fish may have been present that were not detected. Additionally, the sampling frequency and effort may not provide adequate resolution which accurately represents less abundant species that may inhabit this stream.

Longfin eel was the only species recorded at both sites, indicating that the STDC weir is generally not a barrier to the stronger climbing fish species. However, eels are not representative of other migratory fish that may inhabit this area which have dramatically different morphologies and climbing abilities.

A visual evaluation of the new fish pass indicates that there is likely no significant impediment to the passage of juvenile galaxiids likely to be present at this altitude. Maintenance should be undertaken to remove the perched end of the ramp, and replacement rocks (or some other device) should be added to the ramp to remediate the smoothed out rock sections, particularly at the top end of the ramp.

Due to the high altitude, considerable distance inland from the sea, and generally steep gradient in this stream, passage for weaker swimming fish is not considered necessary, as these fish are unlikely to occur naturally at these sites.

In order to confirm that migratory and native fish species aside from eel are able to navigate the weir, it is recommended that the next fish survey is modified to include eDNA sampling as well as electric fishing. If visual clarity permits, the spotlight method could also be utilised.

If regular inspections of the fish pass confirm that it is operating as required and being maintained, it is recommended that the fish monitoring be conducted once every three years as per the scheduled monitoring programme currently implemented.

2.4.2.2 Kapuni Stream – Hawera WTP

A two site fish survey was undertaken in the Kapuni Stream on 31 January 2022, in order to determine whether the water intake structure and fish pass on the bed of the Kapuni Stream (Photo 2) effectively provided for fish passage. This survey employed the electric fishing technique.

Survey site 1 was 60 m upstream of the weir, while site 2 was 60 m downstream of the weir. Both survey sites included similar habitat, with predominantly gravels and cobbles. Both sites were partially shaded, with good water clarity.

Photo 2 Aerial view of the Kapuni Stream fish pass, 31 January 2022

Five fish species were recorded during this survey, being longfin eel, redfin bully, common bully, koaro, and rainbow trout. Longfin eel were the most abundant species recorded, and they were present at both sites. Koaro were also present at both sites. Abundances of the bully species were low, with a single fish of each species recorded, this is similar to numbers recorded in previous surveys. The altitude of the sites may have contributed to the low species richness and abundance, as species richness and abundance is highest at the coast, and decreases with altitude. The previous surveys have recorded juvenile koaro and longfin eel upstream of the weir, indicating that these species are recruiting. The presence of a redfin bully above the weir in the current survey supports that conclusion.

The damage/removal to rocks originally cemented into the fish pass that had been noted in previous surveys was also observed in the current survey. Although this does not appear to be impacting on the ability of climbing species (that currently arrive downstream of the weir) to migrate upstream, any further

removal/damage to these rocks could make the fish pass less effective in future. There is the possibility that additional species with lesser climbing abilities may reach this part of the river as barriers to fish passage are remedied downstream. Maintenance and/or repair of the fish pass may be required if such species are recorded downstream of the weir in future surveys.

Overall, due to the low numbers of fish recorded in the current survey, these results can only be used to provide an indication as to whether the weir presents a barrier to fish passage. The results of the current and previous survey do not indicate that the weir presents a barrier.

The current survey frequency, being a two site survey completed every three years, is considered adequate, and it is recommended that this level of monitoring continue.

2.5 Abstraction data review

STDC's abstraction data is transmitted in 'real time' to the Council, where the data is processed and reviewed, to assess compliance with consented rates and volumes (Table 8) as per their consent conditions.

Table 8 Summary of abstraction data compliance

Water Treatment Plant	Source	Maximum volume (m³/day)	Consented volume (m³/day)	Compliance with volume	Maximum rate (L/s)	Consented rate (L/s)	Compliance with rate
Eltham	Waingongoro	4,653	5,200	100%	60.9	64	100%
Hawera	Kapuni	10,132	12,100	100%	126.7	147	100%
Памета	Kapuni bore	2,586	4,320	100%	35.1	50	100%

Beach -	Bore 2	N/E	80	-	N/E	1.5	-

Key: N/E= consent not exercised N/A= no limit set in consent

^{*}within +/- 5% error allowed with the meter.

2.6 Hydrological monitoring

Stream flow gaugings were completed by Council on behalf of STDC as part of their compliance monitoring requirements. Table 9 shows the stream measurements that were completed and for which scheme and whether the flow was above their consented limit.

Table 9 Summary of flow gaugings conducted

Date	Water Treatment Plant	Stream	Flow (L/s)	Compliant (Y/N)
08-Sep-2021	Waimate West	Mangawhero-iti	1,267	Υ
25-Nov-2021	Waimate West	Mangawhero-iti	215	Υ
09-Dec-2021	Waimate West	Otakeho	327	N/A
13-Jan-2022	Waimate West	Otakeho	267	N/A
18-Jan-2022	Waimate West	Otakeho	295	N/A
18-Jan-2022	Eltham	Waingongoro	236	Y – water restrictions were in place
28-Jan-2022	Rahotu	Pungaereere	93	N/A
31-Jan-2022	Waimate West	Mangawhero-iti	170	Υ
11-Feb-2022	Waimate West	Mangawhero-iti	241	Υ
11-Feb-2022	Eltham	Waingongoro	746	Υ
24-Feb-2022	Rahotu	Pungaereere	469	N/A
24-Feb-2022	Hawera	Kapuni	1,493	N/A
15-Mar-2022	Waimate West	Otakeho	186	N/A
28-Mar-2022	Waimate West	Mangawhero-iti	348	Y
13-Apr-2022	Waimate West	Mangawhero-iti	230	Υ
02-May-2022	Waimate West	Mangawhero-iti	165	Y

STDC are required to record water level for a number of their schemes, so that when sufficient flow gaugings have been undertaken, a rating can be established to allow for real time flow monitoring. STDC also record groundwater level data as part of their consent conditions. Results of the current water level and flow monitoring are summarised in Table 10.

Table 10 Groundwater level and stream flow compliance summary

Water Treatment Plant	Source	Type of data	Residual flow/level limit on consent?	Compliant with limits (Y/N)
	Bore 1 – GND0073	Groundwater level	No	N/A
Patea	Bore 4 – GND2197	Groundwater level	No	N/A
	Bore 5 – GND2361	Groundwater level	No	N/A
Waimate West	Mangawhero-iti Stream	Stream flow	32 L/s	Υ
	Chester St bore	Groundwater level	No	N/A
Waverley	Fookes St bore	Groundwater level	No	N/A
	Swinbourne St bore	Groundwater level	No	N/A

Once there has been sufficient flow gaugings completed for the Eltham, Hawera and Rahotu WTPs, ratings will be established, and flow monitoring will occur.

2.7 Leak detection and water conservation

Eight of the fifteen water take consents require STDC to complete a report detailing:

- a. the work done to detect and minimise leaks;
- b. water use efficiency and conservation measures undertaken and planned; and
- c. water use benchmarking data for the region and how the area supplied by the consent compares.

This report is to be provided to Council on a yearly basis and is to cover the 1 July to 30 June period.

2.7.1 Leak detection and repairs

STDC complete leak detection works across all ten schemes that they operate. Table 11 is a summary of the reactive repairs for the ten schemes.

Table 11 Summary of leak detection and repairs

Water Treatment			Leak Repairs	
Plant	Source	Consent	Major	Minor
Eltham	Waingongoro River	0213-3	11	33
la ala a	Mangatoki Stream	1185-3	0	17
Inaha	Waingongoro River 1186-3 8 17		Major	17
	Kapuni Stream	0146-2	50	202
Hawera	Kapuni Bore	7002-1	58	203
Opunake	Waiaua River	0232-4	15	76
Patea	Bores 1, 4 and 5	3388-3	5	17
Rahotu	Pungaereere Stream	3696-3	2	0
Wai-inu	Bore	3770-3	1	1
	Bore	10370-1		
	Mangawhero – iti Stream	0634-3	42	100
Waimate West	Maimate West Mangawhero Stream Otakeho Stream 3911-2		43 10	109
Waverley	Chester St, Fookes St and Swinbourne St bores	3313-3	11	24
Waverley Beach	Bore	9563-1	0	0

These repairs are reactive repairs that STDC are notified of by the public. STDC undertakes maintenance and long term project works for each of the schemes. These works include:

- repairs and/or replacements to water mains;
- assessments of pipework of intakes and raw water;
- · repairs/replacements of water trunk lines;
- renewal of pipework;
- installation of pressure reducing valves;
- installation of back-up generators at reservoir pumps;

- improvements/protections to water intakes;
- planning and implementation for additional reservoir storage;
- planning for improving taste and odour or water supply;
- planning and implementation to reduce water treatment process losses;
- investigation into new water resources new bores;
- improving water treatment process clarifiers and solids capture.

These projects and maintenance are all ways that STDC implement improvements in their water treatment process.

2.7.2 Water use efficiency and conservation measures

STDC have undertaken the following methods to address efficiency and conservation needs:

- · water metering;
- network management;
- benchmark water loss surveys;
- water restrictions during low summer flows; and
- customer notices and advice.

Table 12 shows the water efficiency measures STDC undertook across their water take schemes.

Table 12 Water efficiency measures

Water Treatment Plant	Water Efficiencies/Conservation Measures
Eltham Hawera Opunake Patea	Installed meter and backflow preventers in commercial and industrial properties
Eltham Inaha Hawera Opunake Waimate West Waverley	Review of large water/farm usage using real time data collection technology
Eltham Hawera Patea Waverley	Leak detection planned
Opunake Rahotu	Acoustic leak detection completed
Eltham Rahotu	Installation of additional meters

With the completion of the acoustic leak detection, it was found that there were leaks which caused significant operational issues for the Rahotu WTP.

Network management included monitoring minimum night flows, reservoir levels and daily demand reports from their data capture network.

Bench loss is a recognised tool used nationally by which each district council must calculate and report on the efficiency of its water reticulation network. The standard measures the loss/wastage within the system

and is expressed as a percentage of water loss verses the water produced. Losses may include leaks and bursts on mains, service reservoirs and service connections as well as losses through metering inaccuracies or water theft. This method is a Department of Internal Affairs mandatory performance measure. Across the schemes there was less than 10% losses at the Opunake, Patea, Waimate West and Waverley Beach schemes and less than 20% losses at Hawera and Wai-inu schemes. There was greater than 20% losses at the Eltham, Inaha, Rahotu and Waverley schemes, with some of those losses related to the reactive leak repairs and leaks found during the leak detection programmes. Overall STDC achieved less than 25% losses, across the schemes, for the monitoring period.

District water restrictions, using the odds and evens system, were implemented on 12 March 2022 due to lack of rainfall and low stream levels and was in place until 3 April 2022. STDC encourages water conservation by advisory notices at the Hawera Cinema, on radio, in newspapers and farming magazines and on their website. They also have it sign written on STDC vehicles.

2.8 Incidents, investigations, and interventions

The monitoring programme for the year was based on what was considered to be an appropriate level of monitoring, review of data, and liaison with the consent holder. During the year matters may arise which require additional activity by the Council, for example provision of advice and information, or investigation of potential or actual causes of non-compliance or failure to maintain good practices. A pro-active approach, that in the first instance avoids issues occurring, is favoured.

For all significant compliance issues, as well as complaints from the public, the Council maintains a database record. The record includes events where the individual/organisation concerned has itself notified the Council. Details of any investigation and corrective action taken are recorded for non-compliant events.

Complaints may be alleged to be associated with a particular site. If there is potentially an issue of legal liability, the Council must be able to prove by investigation that the identified individual/organisation is indeed the source of the incident (or that the allegation cannot be proven).

In the 2021-2022 period, the Council was not required to undertake significant additional investigations and interventions, or record incidents, in association with STDC's conditions in resource consents or provisions in Regional Plans.

3 Discussion

3.1 Discussion of site performance

STDC has been very proactive in having all abstraction data for all consents telemetered to Council's database regardless of whether consent conditions require it or not. During the monitoring period 100% compliance was attained in regards to abstraction.

STDC is required to provide council with self-monitoring discharge data. Self-monitoring data for the monthly discharge samples were compliant with consent conditions for levels of free available chlorine, pH, and suspended solids throughout the monitoring year.

Discharge rates at Opunake complied with consent conditions 58% of the time, this was due to erosion in the headwaters of the Waiaua River that meant that more water was required normal, as much of the water was discharged back out during the treatment process, resulting in higher than consented discharges to the river. Ongoing discussion are occurring between Council and STDC, and enforcement action has been undertaken in the 2022-2023 monitoring period to address these breaches. STDC has been advised to apply for a consent to increase the discharge volume allowed for the Opunake WTP and also to advise the Council of any non-compliances in a prompt manner.

Discharge rates at Waimate West complied with the volume limit at least 90% of the time. Condition 4 of consent 0129-3 allows for two instances annually where the discharge rate can be exceeded during clarifier drain down so compliance was approximately at 92% when this was considered. This consent is due to expire in June 2023 where the discharge limit will be re-assessed. STDC have been advised that they are required to be compliant with their consent conditions. Ongoing discussions are occurring and enforcement action is likely to occur.

Reports required by consents 0146-2, 0232-4, 0634-3, 1185-3, 1186-3, 3696-3 and 3911 on efficient water use, leak detection and repair were submitted to the Council. A number of leaks were repaired at WTPs around the district during 2021-2022. STDC also carried out several other projects and maintenance activities, along with the implementation of various measures to increase the efficient use of water at the WTP sites.

3.2 Environmental effects of exercise of consents

STDC undertakes filter backwash discharge sampling on a regular basis, the results of which all complied with consent limits. Council also undertook sampling at the Inaha, Kapuni and Waimate West WTPs. The results complied with consent conditions and the discharges were not likely to be causing any adverse environmental effects.

Macroinvertebrate surveys found no evidence of adverse effects in regards to abstraction from or discharges to the Kapuni (Hawera WTP), Mangawhero-iti (Waimate West WTP), or Pungaereere (Rahotu WTP) streams.

Fish surveys undertaken in relation to the Hawera WTP (Kapuni Stream) and the Waimate West WTP (Mangawhero Stream) found that the structures were unlikely to be causing a barrier to fish passage. STDC was advised to ensure maintenance be carried out on the structures and some improvements to increase fish passage were suggested.

3.3 Evaluation of performance

A tabular summary of STDC's compliance record for the year under review is set out in Tables 13-45.

3.3.1 Eltham WTP

Table 13 Summary of performance for Consent 0213-4 (Eltham WTP)

Purpose: To take and use water from the Waingongoro River for municipal water supply purposes			
	Condition requirement	Means of monitoring during period under review	Compliance achieved?
1.	Limit on abstraction volume and rate	Review of abstraction data provided	Yes
2.	Water measuring equipment to be installed and maintained	Inspection	Yes
3.	Validation of measuring equipment	Last verified August 2019	Yes
4.	Advise Council of equipment failure	Liaison with consent holder	N/A
5.	Water meter to be accessible to Council	Inspection	Yes
6.	Water records to be in a suitable format and transmitted to Council	Records received	Yes
7.	Rating curve to be established in Waingongoro River	To be established – Insufficient gaugings completed	N/A
8.	Water restrictions to be implemented when flow is less than 387 L/s for seven or more consecutive days	Water restrictions were enforced from 12 March – 3 April 2022	Yes
9.	Report to be provided every three years detailing the effectiveness of water restrictions	Due by September 2022	N/A
10.	Adoption of best practicable option	Inspections, liaison with consent holder, data review	Yes
11.	Provide annual leak report	Provided	Yes
12.	Review of hydrological records to update estimate of mean annual low flow. Before June 2024, then three yearly	Due by June 2024	N/A
13.	Seven annual payments of \$7,000 for the purpose of environmental enhancement	First payment received September 2021	Yes
14.	Screening of intake to avoid fish entrapment	Installed 3 March 2022	Yes
15.	Review provision	Next option for review June 2024	N/A

Purpose: To take and use water from the Waingongoro River for municipal water supply purposes		
Condition requirement	Means of monitoring during period under review	Compliance achieved?
Overall assessment of consent compliance and environmental performance in respect of this consent		High
Overall assessment of administrative pe	erformance in respect of this consent	High

Table 14 Summary of performance for Consent 0989-3 (Eltham WTP)

	Condition requirement	Means of monitoring during period under review	Compliance achieved?
	Adoption of best practicable option	No discharge during period under review	N/A
	Notification of discharge two days prior	No discharge during period under review	N/A
	Volume of discharge not to exceed 5,000 m³ once per year	No discharge during period under review	N/A
•	Discharge only when flows in Waingongoro > 1,050 L/s	No discharge during period under review	N/A
	Discharge across land, no direct discharge to water	No discharge during period under review	N/A
•	Consent holder to reduce volume of sediment and silt in the discharge	No discharge during period under review	N/A
	Suspended solids in discharge not to exceed 100 g/m³	No discharge during period under review	N/A
	Discharge not to have effects on receiving water	No discharge during period under review	N/A
	Review provision	Next option for review June 2023	N/A

Table 15 Summary of performance for Consent 1811-4 (Eltham WTP)

	Purpose: To discharge filter backwash from the Eltham WTP via a settling pond into an unnamed tributary of the Waingongoro River			
	Condition requirement	Means of monitoring during period under review	Compliance achieved?	
1.	Adoption of best practicable option	Inspection	Yes	
2.	Limits on chlorine, pH and suspended solids in the discharge	Review of consent holder data	Yes	

Purpose: To discharge filter backwash from the Eltham WTP via a settling pond into an unnamed tributary of the Waingongoro River

	Condition requirement	Means of monitoring during period under review	Compliance achieved?
3.	Discharge not to cause certain effects in the receiving waters below the established mixing zone	Inspection	Yes
4.	Review provision	Next option for review June 2023	N/A
Overall assessment of consent compliance and environmental performance in respect of this consent			High
Ov	erall assessment of administrative po	erformance in respect of this consent	High

3.3.2 Hawera WTP

Table 16 Summary of performance for Consent 0146-2 (Hawera WTP)

Purpose: To take and use water from the Kapuni Stream for municipal water supply purposes			
	Condition requirement	Means of monitoring during period under review	Compliance achieved?
1.	Limit on abstraction volume and rate	Review of abstraction data provided	Yes
2.	Water measuring equipment to be installed and maintained	Records received	Yes
3.	Consent to be exercised in accordance with application documentation. Report on efficiency measures every two years	Report received	Yes
4.	Reporting of events when abstraction is greater than 124.5 L/s	Data review	N/A
5.	Mitigation by riparian planting	Total amount has been paid to the Taranaki Tree Trust	N/A
6.	Preparation and maintenance of management plan for Kapuni Stream in conjunction with other users (within three months of granting)	Liaison with consent holder – Plan prepared in 2003, updated in 2006, 2010 and 2013	Yes
7.	Annual leak detection and repair report	Report received	Yes
8.	Point of abstraction	Inspection	Yes
9.	Review provision	Consent expired – s124 protected	N/A
	erall assessment of consent complia s consent	nce and environmental performance in respect of	High
Ov	erall assessment of administrative pe	erformance in respect of this consent	High

Table 17 Summary of performance for Consent 0933-3 (Hawera WTP)

Purpose: To discharge up to 227 m³ /day of settling pond supernatant from a water treatment plant into the Kapuni Stream Means of monitoring during period under Compliance Condition requirement review achieved? 1. 	erall assessment of consent complia consent	High					
Overall assessment of administrative performance in respect of this consent			High				

During the monitoring period, STDC demonstrated an overall good level of environmental performance and a high level of administrative performance.

3.4 Recommendations from the 2020-2021 Annual Report

In the 2020-2021 Annual Report, it was recommended:

- 1. THAT in the first instance, monitoring of consented activities in relation to the STDC water supplies in the 2021-2022 year continue at the same level as in 2020-2021.
- 2. THAT eDNA analysis be undertaken as recommended in the attached Fish Survey Report during any future fish surveys.
- 3. THAT should there be issues with environmental or administrative performance in 2021-2022, monitoring may be adjusted to reflect any additional investigation or intervention as found necessary.
- 4. THAT the option for a review of resource consent 3388-3.1 in June 2022, as set out in condition 13 of the consent, not be exercised, on the grounds that the current conditions are adequate.

Recommendations one and four were implemented, while it was not considered necessary to carry out any eDNA analysis as per recommendation two or to complete any additional monitoring or investigation as per recommendation three.

3.5 Alterations to monitoring programmes for 2022-2023

In designing and implementing the monitoring programmes for air/water discharges in the region, the Council has taken into account:

- the extent of information already made available through monitoring or other means to date;
- its relevance under the RMA;
- the Council's obligations to monitor consented activities and their effects under the RMA;
- the record of administrative and environmental performances of the consent holder; and
- reporting to the regional community.

The Council also takes into account the scope of assessments required at the time of renewal of permits, and the need to maintain a sound understanding of industrial processes within Taranaki exercising resource consents.

No significant changes are planned for 2022-2023 monitoring programme. In addition to the current fish survey monitoring schedule, it has been recommended that eDNA analysis be undertaken where available during any future fish surveys.

It should be noted that the proposed programme represents a reasonable and risk-based level of monitoring for the sites in question. The Council reserves the right to subsequently adjust the programme from that initially prepared, should the need arise if potential or actual non-compliance is determined at any time during 2022-2023.

3.6 Exercise of optional review of consent

Resource consents 0989-3, 1811-4, 3770-3, 3927-3, 3928-3, 4826-3, 5365-2, 5451-2 and 5452-2 provide for an optional review of the consent in June 2023. Conditions of the consents allow the Council to review the consent for the purpose of ensuring the conditions are adequate to deal with any adverse effects on the environment.

Based on the results of monitoring in the year under review, and in previous years as set out in earlier annual compliance monitoring reports, it is considered that there are no grounds that require a review to be pursued.

4 Recommendations

- 1. THAT in the first instance, monitoring of consented activities in relation to the STDC water supplies in the 2022-2023 year continue at the same level as in 2021-2022.
- 2. THAT eDNA analysis be undertaken as recommended in the attached Fish Survey Report during any future fish surveys.
- 3. THAT should there be issues with environmental or administrative performance in 2022-2023, monitoring may be adjusted to reflect any additional investigation or intervention as found necessary.
- 4. THAT the option for a review of resource consents 0989-3, 1811-4, 3770-3, 3927-3, 3928-3, 4826-3, 5365-2, 5451-2 and 5452-2 in June 2023, not be exercised, on the grounds that the current conditions are adequate.

Glossary of common terms and abbreviations

The following abbreviations and terms may be used within this report:

Biomonitoring Assessing the health of the environment using aquatic organisms.

COD Chemical oxygen demand. A measure of the oxygen required to oxidise all matter in

a sample by chemical reaction.

Condy Conductivity, an indication of the level of dissolved salts in a sample, usually

measured at 25°C and expressed in mS/m.

DRP Dissolved reactive phosphorus.

Fresh Elevated flow in a stream, such as after heavy rainfall.

g/m³ Grams per cubic metre, and equivalent to milligrams per litre (mg/L). In water, this is

also equivalent to parts per million (ppm), but the same does not apply to gaseous

mixtures.

Incident An event that is alleged or is found to have occurred that may have actual or

potential environmental consequences or may involve non-compliance with a consent or rule in a regional plan. Registration of an incident by the Council does

not automatically mean such an outcome had actually occurred.

Intervention Action/s taken by Council to instruct or direct actions be taken to avoid or reduce

the likelihood of an incident occurring.

Investigation Action taken by Council to establish what were the circumstances/events

surrounding an incident including any allegations of an incident.

L/s Litres per second.

MCI Macroinvertebrate community index; a numerical indication of the state of biological

life in a stream that takes into account the sensitivity of the taxa present to organic

pollution in stony habitats.

SQMCI Semi quantitative macroinvertebrate community index; a numerical indication of the

state of biological life in a stream that takes into account the sensitivity and

abundance of the taxa present to organic pollution in stony habitats.

mS/m Millisiemens per metre.

Mixing zone The zone below a discharge point where the discharge is not fully mixed with the

receiving environment. For a stream, conventionally taken as a length equivalent to

7 times the width of the stream at the discharge point.

NH₄ Ammonium, normally expressed in terms of the mass of nitrogen (N).

NH₃ Unionised ammonia, normally expressed in terms of the mass of nitrogen (N).

NWMR National Water Metering Regulations 2010.

NNN Nitrate-Nitrite Nitrogen.

NTU Nephelometric Turbidity Unit, a measure of the turbidity of water.

PACL Poly aluminium chloride – a flocculant used in water treatment.

pH A numerical system for measuring acidity in solutions, with 7 as neutral. Numbers

lower than 7 are increasingly acidic and higher than 7 are increasingly alkaline. The scale is logarithmic i.e. a change of 1 represents a ten-fold change in strength. For

example, a pH of 4 is ten times more acidic than a pH of 5.

For further information on analytical methods, contact an Environment Quality Manager.

Appendix I

Resource consents held by STDC

(For a copy of the signed resource consent please contact the TRC Consents department)

Water abstraction permits

Section 14 of the RMA stipulates that no person may take, use, dam or divert any water, unless the activity is expressly allowed for by a resource consent or a rule in a regional plan, or it falls within some particular categories set out in Section 14. Permits authorising the abstraction of water are issued by the Council under Section 87(d) of the RMA.

Water discharge permits

Section 15(1)(a) of the RMA stipulates that no person may discharge any contaminant into water, unless the activity is expressly allowed for by a resource consent or a rule in a regional plan, or by national regulations. Permits authorising discharges to water are issued by the Council under Section 87(e) of the RMA.

Air discharge permits

Section 15(1)(c) of the RMA stipulates that no person may discharge any contaminant from any industrial or trade premises into air, unless the activity is expressly allowed for by a resource consent, a rule in a regional plan, or by national regulations. Permits authorising discharges to air are issued by the Council under Section 87(e) of the RMA.

Discharges of wastes to land

Sections 15(1)(b) and (d) of the RMA stipulate that no person may discharge any contaminant onto land if it may then enter water, or from any industrial or trade premises onto land under any circumstances, unless the activity is expressly allowed for by a resource consent, a rule in a regional plan, or by national regulations. Permits authorising the discharge of wastes to land are issued by the Council under Section 87(e) of the RMA.

Land use permits

Section 13(1)(a) of the RMA stipulates that no person may in relation to the bed of any lake or river use, erect, reconstruct, place, alter, extend, remove, or demolish any structure or part of any structure in, on, under, or over the bed, unless the activity is expressly allowed for by a resource consent, a rule in a regional plan, or by national regulations. Land use permits are issued by the Council under Section 87(a) of the RMA.

Coastal permits

Section 12(1)(b) of the RMA stipulates that no person may erect, reconstruct, place, alter, extend, remove, or demolish any structure that is fixed in, on, under, or over any foreshore or seabed, unless the activity is expressly allowed for by a resource consent, a rule in a regional plan, or by national regulations. Coastal permits are issued by the Council under Section 87(c) of the RMA.

Eltham WTP (STDC)

Discharge Permit Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Decision Date: 5 November 2012

Commencement

Date:

5 November 2012

Conditions of Consent

Consent Granted: To discharge reservoir contents from the Eltham Water

Supply Reservoir onto land adjacent to the Waingongoro

River at or about (NZTM) 1708817E-5639437N

Expiry Date: 1 June 2029

Review Date(s): June 2017, June 2023

Site Location: Finnerty Road Ngaere Eltham

Legal Description: Lot 1 DP 11209 Blk V Ngaere SD

(Discharge source & site)

Catchment: Waingongoro

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent including, but not limited to, ensuring the discharge occurs over a period in excess of 4 days.
- 2. The consent holder shall notify the Council of the intention to discharge at least 2 working days prior to discharge occurring. Notification shall include the consent number and a brief description of the activity consented and be emailed to worknotification@trc.govt.nz.
- 3. The volume of the discharge shall not exceed 5000 cubic metres and shall occur no more frequently than once every calendar year.
- 4. The discharge shall only commence when flows in the Waingongoro River at Eltham road are greater than 1050 litres per second.
- 5. All reservoir contents shall be directed over land before entering the Waingongoro River. There shall be no direct discharge to the Waingongoro River.
- 6. The consent holder shall, as far as practicable, reduce the volume of sediment and silt in the discharge before entering the Waingongoro River, including the off-site disposal of settled solids from the bottom of the reservoir.
- 7. The maximum concentration of the suspended solid contained in the discharge shall not exceed 100 gm⁻³.
- 8. After allowing for reasonable mixing, within a mixing zone extending 100 metres downstream of the discharge point, the discharge shall not, either by itself or in combination with other discharges, give rise to any or all of the following effects in the receiving water:
 - a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - b) any conspicuous change in the colour or visual clarity;
 - c) any emission of objectionable odour;
 - d) the rendering of fresh water unsuitable for consumption by farm animals;
 - e) any significant adverse effects on aquatic life.

Consent 0989-3

9. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2017 and/or June 2023, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Discharge Permit Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

Hawera 4640

Decision Date: 28 June 2017

Commencement Date: 28 June 2017

Conditions of Consent

Consent Granted: To discharge filter backwash from the Eltham Water

Treatment Plant via a settling pond into an unnamed

tributary of the Waingongoro River

Expiry Date: 1 June 2035

Review Date(s): June 2023, June 2029

Site Location: Eltham Water Treatment Plant, 225B Finnerty Road, Ngaere

Grid Reference (NZTM) 1709710E-5638778N

Catchment: Waingongoro

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any actual or likely adverse effect on the environment associated with the discharge of contaminants from the site.
- 2. Constituents of the discharge shall meet the standards shown in the following table.

Constituent	Standard
Suspended solids	Concentration not greater than 20 gm-3
Free available chlorine	Concentration no greater than 0.1 gm-3
рН	Within the range 6.0 to 9.0

- 3. After allowing for a mixing zone of 25 metres downstream of the discharge point, the discharge shall not give rise to any of the following effects in the unnamed tributary of the Waingongoro River;
 - (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - (b) any conspicuous change in the colour or visual clarity;
 - (c) any emission of objectionable odour;
 - (d) the rendering of fresh water unsuitable for consumption by farm animals; and
 - (e) any significant adverse effects on aquatic life.
- 4. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2023 and/ or June 2029, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Water Permit

Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA

Consent Granted

Date:

15 December 1999

Conditions of Consent

Consent Granted: To take and use water from the Waingongoro River for

municipal water supply purposes at or about GR:

Q20:188-014

Expiry Date: 1 June 2018

Review Date(s): June 2002, June 2006, June 2012

Site Location: Finnerty Road, Ngaere, Eltham

Legal Description: Pt 31 Lot 2 DP 2918 Blk V Ngaere SD

Catchment: Waingongoro

- a) That on receipt of a requirement from the General Manager, Taranaki Regional Council (hereinafter the General Manager), the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) That unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) That the consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. THAT the consent allows the abstraction of:
 - a) 4020 cubic metres/day [47 litres/second] on an unrestricted basis; and
 - b) 1500 cubic metres/day [17 litres/second] on a restricted basis as per condition 6.
- 2. THAT the consent holder shall install and maintain, to the satisfaction of the General Manager, Taranaki Regional Council, a measuring device capable of recording daily rates of abstraction and shall make such records available to the General Manager, Taranaki Regional Council, upon request.
- 3. THAT the exercise of this consent shall be undertaken in general accordance with the information supplied in support of application 534, particularly regarding the promotion of the efficiency of use of the water, and the installation of a telemetry system at the water treatment plant.
- 4. THAT the consent holder shall quantify the reticulation system losses by 31 December 2000 and report the results to the General Manger, Taranaki Regional Council, by 28 February 2001.
- 5. THAT the consent holder shall investigate and report on the blocking of the intake, and options for addressing this; the report to be received by the General Manager, Taranaki Regional Council, not later than 10 months from the date the consent is granted.
- 6. THAT the Taranaki Regional Council by the agreement of the consent holder, shall review condition 1(b), pursuant to section 128 of the Resource Management Act 1991, by giving notice of review during the month of June 2002, for the purpose of assessing the success of consent holder 5437 in implementing water conservation measures in reducing plant water use and to demonstrate a need for the water.
- 7. THAT by the agreement of the consent holder, the consent holder shall mitigate the effects of the abstraction by donating \$10,000 [goods and services tax exclusive] to the Taranaki Tree Trust by 31 January 2000, for the purpose of providing riparian management in the Waingongoro catchment, in the reach above the Climie Stream, and in the Climie Stream catchment.

8. THAT the Taranaki Regional Council may review, according to section 128 of the Resource Management Act 1991, any or all of the conditions of this consent by giving notice of review during June 2002 and/or June 2006 and/or June 2012, for the purpose of ensuring that the conditions are adequate to deal with any significant adverse effects on the environment arising from the exercise of this consent, which either were not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Change To Conditions Date:

28 October 2008 [Granted: 7 June 2000]

Conditions of Consent

Consent Granted: To take and use water from the Kapuni Stream for

municipal water supply purposes at or about (NZTM)

1701447E-5630678N

Expiry Date: 1 June 2020

Review Date(s): June 2011

Site Location: Kapuni Stream, Palmer Road, Kapuni

Legal Description: Adjacent to Lot 1 DP 10570 & Lot 3 DP 10570 Blk XVI

Kaupokonui SD

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. That the consent allows the abstraction of:
 - a) 10756.8 cubic metres/day [124.5 litres/second] on an unrestricted basis; and
 - b) 1343.2 cubic metres/day [15.5 litres/second] on a restricted basis as per condition 4.
- 2. The consent holder shall install and maintain, to the satisfaction of the Chief Executive, Taranaki Regional Council, a measuring device(s) capable of recording daily rates of abstraction and shall make such records available to the Chief Executive, Taranaki Regional Council, on a monthly basis.

Condition 3 [changed]

3. The exercise of this consent shall be undertaken in general accordance with the information supplied in support of applications 533 and 6128, particularly regarding the promotion of the efficiency of use of the water and reporting on efficiency measures every two years from the commencement of this consent.

Conditions 4 to 7 [unchanged]

4. That the water available under condition 1(b) shall only be used for those times where peak demand exceeds 124.5 litres/second. On each occasion that condition 1(b) is exercised, the consent holder shall, within seven days of the reduction of demand below 124.5 litres/second, provide a written report to the Chief Executive, Taranaki Regional Council, detailing the volumes of water abstracted, the time period during which the abstraction exceeded 124.5 litres/second, and the conservation measures adopted during that time.

Consent 0146-2

- 5. That, by the agreement of the consent holder, the consent holder shall mitigate the effects of the abstraction by donating a minimum amount of \$3,150 and a maximum of \$12,000 per annum [GST exclusive and inflation adjusted], with a total contribution not to exceed \$63,000 [GST exclusive and inflation adjusted] to the Taranaki Tree Trust, for the purpose of providing riparian management in the Kapuni Stream and its tributaries, preferably above Skeet Road.
- 6. The consent holder shall prepare and subsequently update and maintain a management plan for the Kapuni Stream between GR's: Q20:116-928 and Q20: 110-913, in conjunction with the other users, including but not restricted to the Natural Gas Corporation of New Zealand Limited and Petrochem Limited, to manage the abstraction of water from and discharge of contaminants to the Kapuni Stream. The management plan shall be submitted to the Chief Executive, Taranaki Regional Council, for approval within three months of the granting of the consent.
- 7. The consent holder shall undertake a leak detection and repair programme throughout the term of the consent within Hawera, Normanby, Okaiawa and Ohawe Beach townships and report on this programme annually to the Chief Executive, Taranaki Regional Council.

Condition 8 [new]

8. The point of abstraction shall remain at its current location [at or about GR: Q20:115-925 NZMSG] until the new intake to be constructed pursuant to resource consent 7413-1 is commissioned. At that time the point of abstraction shall be at the new intake [at or about 1701447E-5630678N NZTM].

Condition 9 [changed, previously condition 8]

9. The Taranaki Regional Council may review, according to section 128 of the Resource Management Act 1991, any or all of the conditions of this consent by giving notice of review during June 2011, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this consent, which either were not foreseen at the time the application was considered or which it was not appropriate to deal with at the time, and for the purpose of assessing the implementation of the leak detection and repair programme specified in condition 7.

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

Conditions 1 to 3 - unchanged

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The exercise of this consent shall be undertaken generally in accordance with the documentation submitted in support of application 4516. In the case of any contradiction between the documentation submitted in support of application 4516 and the conditions of this consent, the conditions of this consent shall prevail.
- 3. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least seven days prior to the exercise of this consent.

Condition 4 - changed

4. The consent holder shall address the issue of a permanent solution for water treatment residuals with the construction of a new water treatment plant, planned for 2010.

Condition 5 to 9 - unchanged

- 5. The consent holder shall properly and efficiently maintain and operate the settlement facility to the general satisfaction of the Chief Executive, Taranaki Regional Council.
- 6. After allowing for a mixing zone of 25 metres downstream of the discharge, the discharge shall not give rise to any of the following effects in the Kapuni Stream:

Consent 0933-3

- i) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
- ii) any conspicuous change in the colour or visual clarity;
- iii) any emission of objectionable odour;
- iv) the rendering of fresh water unsuitable for consumption by farm animals; and
- v) any significant adverse effects on aquatic life.
- 7. The discharge quality shall not exceed the following limits at all times:

Component	Concentration
suspended solids	20g/m^3
free available chlorine	0.1g/m^3
pН	6.5 - 8.5

- 8. This consent shall lapse on the expiry of five years after the date of issue of this consent, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 9. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2008 and/or June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Consent Holder: Private Bag 902 HAWERA 4640

Change To Conditions Date:

10 February 2009 [Granted: 2 November 2006]

Conditions of Consent

Consent Granted: To take and use up to 4,320 m³/day of groundwater at a

maximum rate of 50 l/s as a combined total from up to three water bores in a bore field at the Kapuni reservoir site for municipal, rural, industrial, and recreational supply

purposes at or about (NZTM) 1701067E-5629178N

Expiry Date: 1 June 2023

Review Date(s): June 2011, June 2017

Site Location: Kapuni reservoir site, off 1054 Skeet Road, Kapuni

Legal Description: Lot 2 DP 6410 Blk XVI Kaupokonui SD

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

Condition 1 to 6 [unchanged]

- 1. The exercise of this consent shall be undertaken in general accordance with the documentation submitted in support of application 4419 and shall ensure the efficient and effective use of water. In the case of any contradiction between the documentation submitted in support of application 4419 and the conditions of this consent, the conditions of this consent shall prevail.
- 2. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least seven days prior to the exercise of this consent.
- 3. Prior to the exercise of this consent, the consent holder shall provide a report to Chief Executive, Taranaki Regional Council, detailing the results of pump testing (72-hour constant discharge at 50 l/s and recovery tests) of the bores used for water supply to show (1) that the abstraction is sustainable, and (2) the effects of the abstraction on flows in the Kapuni Stream.
- 4. The volume of groundwater abstracted shall not exceed 4,320 cubic metres per day at a rate not exceeding 50 litres per second as a combined total from the bores in the bore field.
- 5. The abstraction shall not cause more than a 10% lowering of the static water level by interference in any adjacent registered water bore located beyond the boundary of the bore field.
- 6. The consent holder shall maintain daily records of the abstraction from each bore including date, abstraction rate and daily volume, and pumping hours, and make these records available to the Chief Executive, Taranaki Regional Council, no later than 31 July of each year, or upon request.

Condition 7 [previously condition 8]

7. The consent holder shall install and maintain a measuring device approved by the Chief Executive, Taranaki Regional Council, on each bore for the purposes of accurately recording the abstraction of water.

Condition 8 [previously condition 9]

8. This consent shall be subject to monitoring by the Taranaki Regional Council and the consent holder shall meet all reasonable costs associated with the monitoring.

Condition 9 [previously condition 10]

9. This consent shall lapse on the expiry of five years after the date of commencement of this consent, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.

Condition 10 [previously condition 11]

10. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Land Use Consent Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Consent Granted

Date:

5 February 2009

Conditions of Consent

Consent Granted: To erect, use and maintain a water intake structure on the

bed of the Kapuni Stream, including temporary damming and diversion during construction at or about (NZTM)

1701447E-5630678N

Expiry Date: 1 June 2023

Review Date(s): June 2011, June 2017

Site Location: Kapuni Stream, Palmer Road, Kapuni

Legal Description: Lot 1 DP 10570 Lot 1 DP 3675 Lot 3 DP 10570 Blk XVI

Kaupokonui SD

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The exercise of this consent shall be undertaken in accordance with the documentation submitted in support of application 6131, in particular Drawing No. 80066/19. If there is any conflict between the documentation submitted in support of application 6131 and the conditions of this consent, the conditions of this consent shall prevail.
- 2. Any disturbance of parts of the riverbed covered by water and/or any works which may result in downstream discolouration of water shall be undertaken only between 1 November and 30 April, except where this requirement is waived in writing by the Chief Executive, Taranaki Regional Council.
- 3. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least 48 hours prior to the commencement and upon completion of the initial installation and again at least 48 hours prior to and upon completion of any subsequent maintenance works which would involve disturbance of or deposition to the riverbed or discharges to water. Notification shall include the consent number and a brief description of the activity consented and be emailed to worknotification@trc.govt.nz. Notification by fax or post is acceptable only if the consent holder does not have access to email.
- 4. The consent holder shall ensure that the area and volume of riverbed disturbance shall, so far as is practicable, be minimised and any areas which are disturbed shall, so far as is practicable, be reinstated.
- 5. The consent holder shall take all reasonable steps to:
 - a. minimise the amount of sediment discharged to the stream;
 - b. minimise the amount of sediment that becomes suspended in the stream; and
 - c. mitigate the effects of any sediment in the stream.

Undertaking work in accordance with *Guidelines for Earthworks in the Taranaki Region*, by the Taranaki Regional Council, will achieve compliance with this condition.

Consent 7413-1

- 6. Except with the written agreement of the Chief Executive, Taranaki Regional Council, the structure authorised by this consent shall be removed and the area reinstated, if and when the structure is no longer required. A further resource consent may be required to authorise the removal of the structure, and the consent holder is advised to seek advice from the Council on this matter.
- 7. The consent holder shall monitor and maintain the fish pass, to ensure it performs as designed and allows for the effective passage of fish.
- 8. In the event that any archaeological remains are discovered as a result of works authorised by this consent, the works shall cease immediately at the affected site and tangata whenua and the Chief Executive, Taranaki Regional Council, shall be notified within one working day. Works may recommence at the affected area when advised to do so by the Chief Executive, Taranaki Regional Council. Such advice shall be given after the Chief Executive has considered: tangata whenua interest and values, the consent holder's interests, the interests of the public generally, and any archaeological or scientific evidence. The New Zealand Police, Coroner, and Historic Places Trust shall also be contacted as appropriate, and the work shall not recommence in the affected area until any necessary statutory authorisations or consents have been obtained.
- 9. This consent shall lapse on 31 March 2014, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 10. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Discharge Permit Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Consent Granted

Date:

13 March 2009

Conditions of Consent

Consent Granted: To discharge membrane backwash water and cleaning

wastewater from the Kapuni Water Treatment Plant into

the Kapuni Stream at or about (NZTM) 1700804E-

5628910N

Expiry Date: 1 June 2023

Review Date(s): June 2011, June 2017

Site Location: Skeet Road, Kapuni

Legal Description: Lot 1 DP 18183 Blk XVI Kaupokonui SD

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. After allowing for reasonable mixing, within a mixing zone extending 25 metres downstream of the discharge point, the discharge shall not, either by itself or in combination with other discharges, give rise to any or all of the following effects in the receiving water:
 - the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - b) any conspicuous change in the colour or visual clarity;
 - c) any emission of objectionable odour;
 - d) the rendering of fresh water unsuitable for consumption by farm animals;
 - e) any significant adverse effects on aquatic life.
- 3. After allowing for reasonable mixing, within a mixing zone extending 25 metres downstream of the of the discharge point, the discharge shall not give rise to an increase in the turbidity of the Kapuni Stream of more than 50%, as determined using NTU [nephelometric turbidity units].
- 4. Constituents of the discharge shall meet the standards shown in the following table.

Constituent	<u>Standard</u>	
free available chlorine	Concentration not greater than 0.1 gm ⁻³	
pН	Within the range 6.5 to 8.5	
suspended solids	Concentration not greater than 20 gm ⁻³	

This condition shall apply before entry of the treated wastewater into the receiving waters at a designated sampling point approved by the Chief Executive, Taranaki Regional Council.

Consent 7446-1

- 5. This consent shall lapse on 31 March 2014, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 6. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Expiry Date: 1 June 2023

Review Date(s): June 2011, June 2017

Site Location: Skeet Road, Kapuni

Legal Description: Lot 1 DP 18183 Blk XVI Kaupokonui SD

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The exercise of this consent shall be undertaken in accordance with the documentation submitted in support of application 6202, in particular Drawing No. 0652C010. If there is any conflict between the documentation submitted in support of application 6202 and the conditions of this consent, the conditions of this consent shall prevail.
- 2. Any disturbance of parts of the riverbed covered by water and/or any works which may result in downstream discolouration of water shall be undertaken only between 1 November and 30 April, except where this requirement is waived in writing by the Chief Executive, Taranaki Regional Council.
- 3. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least 48 hours prior to the commencement and upon completion of the initial installation and again at least 48 hours prior to and upon completion of any subsequent maintenance works which would involve disturbance of or deposition to the riverbed or discharges to water. Notification shall include the consent number and a brief description of the activity consented and be emailed to worknotification@trc.govt.nz. Notification by fax or post is acceptable only if the consent holder does not have access to email.
- 4. The consent holder shall ensure that the area and volume of riverbed disturbance shall, so far as is practicable, be minimised and any areas which are disturbed shall, so far as is practicable, be reinstated.
- 5. The consent holder shall take all reasonable steps to:
 - a. minimise the amount of sediment discharged to the stream;
 - b. minimise the amount of sediment that becomes suspended in the stream; and
 - c. mitigate the effects of any sediment in the stream.

Undertaking work in accordance with *Guidelines for Earthworks in the Taranaki Region,* by the Taranaki Regional Council, will achieve compliance with this condition.

Consent 7447-1

- 6. Except with the written agreement of the Chief Executive, Taranaki Regional Council, the structure authorised by this consent shall be removed and the area reinstated, if and when the structure is no longer required. A further resource consent may be required to authorise the removal of the structure, and the consent holder is advised to seek advice from the Council on this matter.
- 7. In the event that any archaeological remains are discovered as a result of works authorised by this consent, the works shall cease immediately at the affected site and tangata whenua and the Chief Executive, Taranaki Regional Council, shall be notified within one working day. Works may recommence at the affected area when advised to do so by the Chief Executive, Taranaki Regional Council. Such advice shall be given after the Chief Executive has considered: tangata whenua interest and values, the consent holder's interests, the interests of the public generally, and any archaeological or scientific evidence. The New Zealand Police, Coroner, and Historic Places Trust shall also be contacted as appropriate, and the work shall not recommence in the affected area until any necessary statutory authorisations or consents have been obtained.
- 8. This consent shall lapse on 31 March 2014, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 9. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Director-Resource Management

Land Use Consent Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Decision Date: 21 February 2013

Commencement Date: 21 February 2013

Conditions of Consent

Consent Granted: To construct, place and use a water intake structure on the

bed of the Waiaua River for water abstraction purposes

Expiry Date: 1 June 2030

Review Date(s): June 2018, June 2024

Site Location: Opunake Water Treatment Plant, 470 Ihaia Road, Opunake

Legal Description: Sec 4 Blk X Opunake SD (Site of structure)

Grid Reference (NZTM) 1678013E-5635411N

Catchment: Waiaua

a. The consent holder shall pay to the Taranaki Regional Council [the Council] all the administration, monitoring and supervision costs of this consent, fixed in accordance to section 36 of the Resource Management Act.

Special conditions

- 1. The water intake structure shall:
 - a) have a 0.75 mm slot size wedge wire screen;
 - b) be 300 mm in diameter;
 - c) 1500 mm in length; and
 - d) the bottom of the screen to sit a nominal 225 mm above the existing riverbed.
- 2. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least 48 hours prior to the commencement and upon completion of the initial installation and again at least 48 hours prior to and upon completion of any subsequent maintenance works which would involve disturbance of or deposition to the riverbed or discharges to water. Notification shall include the consent number and a brief description of the activity consented and be emailed to worknotification@trc.govt.nz. Notification by fax or post is acceptable only if the consent holder does not have access to email.
- 3. The consent holder shall ensure that the area and volume of riverbed disturbance shall, so far as is practicable, be minimised and any areas which are disturbed shall, so far as is practicable, be reinstated.
- 4. The consent holder shall take all reasonable steps to:
 - a. minimise the amount of sediment discharged to the river;
 - b. minimise the amount of sediment that becomes suspended in the river; and
 - c. mitigate the effects of any sediment in the river.

Undertaking work in accordance with *Guidelines for Earthworks in the Taranaki Region,* by the Taranaki Regional Council, will achieve compliance with this condition.

- 5. The consent holder shall ensure that the water intake structure is appropriately screened to avoid the entrapment of freshwater fauna. The maximum screen slot velocity shall be no more than 0.15 m/s at design capacity.
- 6. The water intake structure shall not obstruct fish passage.
- 7. To mitigate the adverse environmental effects of this consent the consent holder shall make a single payment of \$20,000 (excluding GST) to the Taranaki Regional Council as a financial contribution for the purpose of providing riparian planting and management in the Waiaua Stream catchment. The payment shall be made before 1 September 2013.

Consent 9473-1

- 8. In the event that any archaeological remains are discovered as a result of works authorised by this consent, the works shall cease immediately at the affected site and tangata whenua and the Chief Executive, Taranaki Regional Council, shall be notified within one working day. Works may recommence at the affected area when advised to do so by the Chief Executive, Taranaki Regional Council. Such advice shall be given after the Chief Executive has considered: tangata whenua interest and values, the consent holder's interests, the interests of the public generally, and any archaeological or scientific evidence. The New Zealand Police, Coroner, and Historic Places Trust shall also be contacted as appropriate, and the work shall not recommence in the affected area until any necessary statutory authorisations or consents have been obtained.
- 9. Except with the written agreement of the Chief Executive, Taranaki Regional Council, the structure authorised by this consent shall be removed and the area reinstated, if and when the structure is no longer required. A further resource consent may be required to authorise the removal of the structure, and the consent holder is advised to seek advice from the Council on this matter.
- 10. This consent shall lapse on 31 March 2018, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 11. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2018 and/or June 2024, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

Page 1 of 4

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The combined rate of taking shall not exceed 29 litres per second, and the volume taken in any 24 hour period ending at midnight (New Zealand Standard Time) shall not exceed 2504 cubic metres.
- 3. The consent holder shall use the gravity take preferentially over the pumped take. The pumped take may be used exclusively only when the gravity take is not operational due to maintenance, capital works or flood damage.
- 4. Before exercising this consent the consent holder shall install, and thereafter maintain a water meter and a datalogger at the site of taking (or a nearby site in accordance with Regulation 10 of the *Resource Management (Measurement and Reporting of Water Takes) Regulations 2010.* The water meter and datalogger shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of ± 5%. Records of the date, the time and the rate and volume of water taken at intervals not exceeding 15 minutes, shall be made available to the Chief Executive, Taranaki Regional Council at all reasonable times.

Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited lifespan.

Consent 1185-3.1

- 5. The consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that water measuring and recording equipment required by the conditions of this consent ('the equipment'):
 - (a) has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - (b) has been tested and shown to be operating to an accuracy of $\pm 5\%$.

The documentation shall be provided:

- (i) within 30 days of the installation of a water meter or datalogger;
- (ii) at other times when reasonable notice is given and the Chief Executive, Taranaki Regional Council has reasonable evidence that the equipment may not be functioning as required by this consent; and
- (iii) no less frequently than once every five years.
- 6. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 7. The intake structures shall be maintained to the satisfaction of the Chief Executive, Taranaki Regional Council. Once the abstraction licensed by this consent is no longer required, the consent holder shall remove the intake structure to the satisfaction of the Chief Executive, Taranaki Regional Council.
- 8. The water meter and datalogger shall be accessible to Taranaki Regional Council officers at all reasonable times for inspection and/or data retrieval. In addition the data logger shall be designed and installed so that Council officers can readily verify that it is accurately recording the required information.
- 9. The records of water taken shall:
 - (a) be in a format that, in the opinion of the Chief Executive, Taranaki Regional Council, is suitable for auditing;
 - (b) specifically record the water taken as 'zero' when no water is taken.
- 10. That measurements made in accordance with condition 4 be transmitted to Taranaki Regional Councils computer system to maintain "real time" records of the water taken, with a delay of no more than 2 hours.
- 11. The intake structures shall be screened to avoid the entrainment of fish.
- 12. The intake structure shall be maintained and operated so that the passage of fish is not obstructed.

Consent 1185-3.1

- 13. The consent holder shall promote the efficient use of water and undertake a leak detection and repair programme through out the term of the consent for the Inaha Water Supply Scheme and report on this programme annually for the duration of this consent.
- 14. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2018 for the purposes of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Director - Resource Management

Land Use Consent Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA

Consent Granted

Date:

15 June 2005

Conditions of Consent

Consent Granted: To maintain an existing low-level weir and fish pass across

the Mangatoki Stream in the Waingongoro catchment at or

about GR: Q20:105-042

Expiry Date: 1 June 2023

Review Date(s): June 2011, June 2017

Site Location: Inaha Intake Site, Palmer Road, Mahoe, Stratford

Legal Description: Sec 24 Blk VII Kaupokonui SD

Catchment: Waingongoro

Tributary: Mangatoki

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The exercise of this consent shall be undertaken generally in accordance with the documentation submitted in support of application 3451. In the case of any contradiction between the documentation submitted in support of application 3451 and the conditions of this consent, the conditions of this consent shall prevail.
- 3. The consent holder shall notify the Chief Executive, Taranaki Regional Council, in writing at least seven days prior to the exercise of this consent.
- 4. The consent holder shall notify the Chief Executive, Taranaki Regional Council, at least 48 hours prior to any maintenance works of the structure[s] or fish pass licensed by this consent which would involve disturbance of, or deposition to, the streambed or discharges to water.
- 5. The consent holder, during any maintenance works, shall adopt the best practicable option to avoid or minimise the discharge of silt or other contaminants into water or onto the streambed and to avoid or minimise the disturbance of the streambed and any adverse effects on water quality.
- 6. The consent holder, during any maintenance, shall ensure that the area and volume of river bed disturbance shall, so far as practicable, be minimised and any areas which are disturbed shall, so far as practicable, be reinstated.
- 7. No maintenance work shall be conducted during the period 1 May to 31 October unless waived in writing by the Chief Executive, Taranaki Regional Council.
- 8. The structure[s] authorised by this consent shall be maintained to ensure the conditions of this consent are met.
- 9. The structure[s] authorised by this consent shall be constructed and maintained so as not to restrict the passage of native fish and trout, to the satisfaction of the Chief Executive, Taranaki Regional Council.

Consent 4102-2

- 10. The structure[s] authorised by this consent shall be removed and the area reinstated, if and when the structure is no longer required. The consent holder shall notify the Taranaki Regional Council at least 48 hours prior to the removal of the structures and reinstatement of the area
- 11. This consent shall lapse on the expiry of five years after the date of issue of this consent, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 12. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Opunake WTP (STDC)

Water Permit

Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Decision Date: 30 July 2013

Commencement Date: 20 August 2013

Conditions of Consent

Consent Granted: To take and use water from the Waiaua River for Opunake

town water supply purposes

Expiry Date: 1 June 2030

Review Date(s): June 2018, June 2024

Site Location: Opunake Water Supply Intake, Ihaia Road, Opunake

Legal Description: Sec 4 Blk X Opunake SD (Site of take & use)

Grid Reference (NZTM) 1678013E-5635411N

Catchment: Waiaua

a) The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance to section 36 of the Resource Management Act 1991.

Special conditions

- 1. Except as provided for in conditions 2 and 3 below, the rate of taking shall not exceed 2200 cubic metres per day or 25.5 litres per second.
- 2. The taking shall occur through the 'new' intake authorised by consent 9473-1 (NZTM 1678013E-5635411N), except that taking may instead temporarily occur through the 'old' intake (NZTM 1678426E-5635847N):
 - (a) prior to the new intake and associated treatment plant being commissioned; and
 - (b) at other times if the new intake is unable to be used.
- 3. When taking occurs through the old intake the rate of taking may be up to 3650 cubic metres per day and 42.2 litres per second if that rate necessary to mitigate the effects of high sediment load.
- 4. If taking occurs through the old intake the consent holder shall advise the Chief Executive, Taranaki Regional Council as soon as practicable. Advice shall be made by emailing worknotification@trc.govt.co.nz with appropriate details including the dates that taking occurred.
- 5. Before exercising this consent the consent holder shall install, and thereafter maintain a water meter and a datalogger at the site of taking. The water meter and datalogger shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of ± 5%. Records of the date, the time and the rate and volume of water taken at intervals not exceeding 15 minutes, shall be made available to the Chief Executive, Taranaki Regional Council at all reasonable times.

Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited lifespan.

- 6. The consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that water measuring and recording equipment required by the conditions of this consent ('the equipment'):
 - (a) has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - (b) has been tested and shown to be operating to an accuracy of \pm 5%.

The documentation shall be provided:

- (i) within 30 days of the installation of a water meter or datalogger;
- (ii) at other times when reasonable notice is given and the Chief Executive, Taranaki Regional Council has reasonable evidence that the equipment may not be functioning as required by this consent; and
- (iii) no less frequently than once every five years.
- 7. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 8. The water meter and datalogger shall be accessible to Taranaki Regional Council officer's at all reasonable times for inspection and/or data retrieval.
- 9. The records of water taken shall:
 - (a) be in a format that, in the opinion of the Chief Executive, Taranaki Regional Council, is suitable for auditing; and
 - (b) specifically record the water taken as 'zero' when no water is taken.
- 10. From a date no later than 1 December 2013, the measurements made in accordance with condition 5 of this consent, in a format to be advised by the Chief Executive, Taranaki Regional Council shall be transmitted to the Taranaki Regional Council's computer system to maintain a 'real time' record of the water taken.
- 11. At all times the consent holder shall adopt the best practicable option to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of water, including, but not limited to, the efficient and conservative use of water.
- 12. The consent holder shall, on an annual basis, provide a report detailing:
 - the work done to detect and minimise leaks;
 - water use efficiency and conservation measures undertaken; and
 - water use benchmarking data for the region and how the area supplied by this consent supplied compare.

The report(s) shall be provided to the Chief Executive, Taranaki Regional Council before 31 August each year and cover the previous 1 July to 30 June period.

Consent 0232-4

- 13. This consent shall lapse on 30 September 2018, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 14. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2018 and/or June 2024, for the purposes of:
 - (a) discontinuing or amending the authorisation to take via the old intake; and/or
 - (b) ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Discharge Permit

Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Decision Date: 30 July 2013

Commencement Date: 30 July 2013

Conditions of Consent

Consent Granted: To discharge water treatment residuals, and pond drainage

water from the Opunake Water Treatment Plant into the

Waiaua River

Expiry Date: 1 June 2030

Review Date(s): June 2018, June 2024

Site Location: Opunake Water Treatment Plant, Ihaia Road, Opunake

Legal Description: Sec 4 Blk X Opunake SD (Discharge source & site)

Grid Reference (NZTM) 1677645E-5635245N

Catchment: Waiaua

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The discharge shall not exceed 120 cubic metres per day.
- 3. After allowing for reasonable mixing, within a mixing zone extending 10 metres downstream of the discharge point, the discharge shall not, either by itself or in combination with other discharges, give rise to any or all of the following effects in the receiving water:
 - a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - b) any conspicuous change in the colour or visual clarity;
 - c) any emission of objectionable odour;
 - d) the rendering of fresh water unsuitable for consumption by farm animals;
 - e) any significant adverse effects on aquatic life.
- 4. Constituents of the discharge shall meet the standards shown in the following table.

Constituent	<u>Standard</u>	
free available chlorine	Concentration not greater than 0.1 gm ⁻³	
pH	Within the range 6.5 to 8.5	
suspended solids	Concentration not greater than 50 gm ⁻³	

This condition shall apply before entry of the treated wastewater into the receiving waters at a designated sampling point approved by the Chief Executive, Taranaki Regional Council.

5. This consent shall lapse on 30 September 2018, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.

Consent 5574-2

6. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2018 and/or June 2024, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

Page 1 of 3

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The total volume of groundwater taken from the three bores combined shall not exceed 1,125 cubic metres per day.
- 2. Subject to condition 3, the rate of take from each bore shall not exceed the maximum rate shown in the table below:

Bore #	Maximum rate
1	4.7 litres per second
4	10 litres per second
5	10 litres per second

- 3. The volume taken from Bore 1 shall not exceed 300 cubic metres per day unless either Bore 4 or Bore 5 is unable to be operated because of breakdown or is shut down for essential maintenance.
- 4. Before exercising this consent the consent holder shall install, and thereafter maintain a water meter and a datalogger on each bore. The water meters and dataloggers shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of \pm 5%.

Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited lifespan.

- 5. Within 30 days of the installation of a water meter or datalogger, and at other times when reasonable notice is given, the consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that:
 - a. water measuring or recording equipment required by the conditions of this consent has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - b. water measuring or recording equipment required by the conditions of this consent has been tested and shown to be operating to an accuracy of \pm 5%.
- 6. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 7. The water meter and datalogger shall be accessible to Taranaki Regional Council officer's at all reasonable times for inspection and/or data retrieval.

Consent 3388-3.1

- 8. At all times the consent holder shall adopt the best practicable option to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of groundwater, including, but not limited to, the efficient and conservative use of water.
- 9. The consent holder shall measure and record the water level in the Brannigan bore (GND0076, located at grid reference 1725550E-5599498N) to an accuracy of \pm 0.05 metres and at intervals not exceeding 15 minutes.
- 10. An accessible groundwater level indicator shall be installed on the Brannigan bore which shows when groundwater levels have reached 48 metres below ground level (mbgl). Should groundwater reach this level then consultation between the owner of the Brannigan bore and the consent holder shall occur and, if the bore owner requires it, the measures in condition 11 shall be implemented.
- 11. That the consent holder shall immediately restrict the exercise of this consent and/or provide a suitable unchlorinated alternative water supply for the Brannigan bore owner should the exercise of this consent restrict the use of the Brannigan bore.
- 12. The taking shall not cause the intrusion of salt water into any freshwater aquifer.
- 13. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2016 and/or June 2022, for the purposes of:
 - a. ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time; and/or
 - b. to require any data collected in accordance with the conditions of this consent to be transmitted directly to the Council's computer system, in a format suitable for providing a 'real time' record over the internet.

- 5. The water meter shall be accessible to Taranaki Regional Council officers at all reasonable times for inspection and/or data retrieval.
- 6. The consent holder shall maintain a record of the water taken by recording the meter reading and the date of the reading at monthly intervals. This record shall be provided to the Chief Executive, Taranaki Regional Council, no later than 31 July of each year, or earlier upon request.

Consent 3770-3

- 7. At all times the consent holder shall adopt the best practicable option to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of water, including, but not limited to, the efficient and conservative use of water.
- 8. This consent shall lapse on 30 June 2017, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 9. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2017 and/or June 2023, for the purposes of:
 - (a) ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time; and/or
 - (b) to require any data collected in accordance with the conditions of this consent to be transmitted directly to the Council's computer system, in a format suitable for providing a 'real time' record over the internet.

Decision Date (Change): 15 May 2013

Commencement Date

(Change):

15 May 2013 (Granted: 12 June 2006)

Conditions of Consent

Consent Granted: To discharge treated washwater from the Waimate Water

Supply Scheme into an unnamed tributary of Kellys Creek

Expiry Date: 1 June 2023

Review Date(s): June 2017

Site Location: Waimate Water Treatment Plant, Rowan Road, Manaia

Legal Description: Pt Sec 79 Blk X Kaupokonui SD (Discharge source & site)

Grid Reference (NZTM) 1695477E-5636870N

Catchment: Kaupokonui

Tributary: Mangawhero

Kellys Creek

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The exercise of this consent shall be undertaken generally in accordance with the documentation submitted in support of applications 3445 and 7390. In the case of any contradiction between the documentation submitted in support of applications 3445 and 7390 and the conditions of this consent, the conditions of this consent shall prevail.
- 3. The discharge shall not exceed 750 m³ per day, except in the following situations:
 - a) During plant start-up where the discharge shall not exceed 7,500 m³ per day for a one-off period of up to 10 days;
 - b) During clarifier drain-down where the discharge shall not exceed 1500 m³ per day, twice annually, for a maximum 24 hour period; and
 - c) During sludge pond dewatering where the discharge shall not exceed 1000 m³ per day, once annually, for up to 14 days.
- 4. The consent holder shall install and continually maintain an erosion protection structure generally in accordance with the plan prepared by CH2M Beca Drawing No. W-DKC-0012, to ensure that the exercise of this consent does not cause any erosion or scour of the streambed.
- 5. The discharge quality shall not exceed the following limits at all times:

Component	Concentration
free available chlorine	$<0.1g/m^3$
suspended solids	20 g/m^3
pН	6.5-8.5

6. The consent holder shall properly and efficiently maintain and operate the settling ponds so as to meet the conditions of this consent.

Consent 0129-3

- 7. After allowing for reasonable mixing, being a mixing zone extending seven times width of the unnamed tributary of Kellys Creek at the point of discharge, any discharge of contaminants shall not give rise to any of the following effects in the unnamed tributary of Kellys Creek:
 - a) any conspicuous change in the colour or visual clarity;
 - b) any emission of objectionable odour;
 - c) the rendering of fresh water unsuitable for consumption by farm animals;
 - d) any significant adverse effects on aquatic life.
- 8. This consent shall lapse on the expiry of five years after the date of issue of this consent, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 9. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Water Permit Pursuant to the Resource Management Act 1991 a resource consent is hereby granted by the Taranaki Regional Council

Name of South Taranaki District Council

Consent Holder: Private Bag 902

HAWERA 4640

Decision Date: 7 June 2011

Commencement

Date:

7 June 2011

Conditions of Consent

Consent Granted: To take water from the Mangawheroiti Stream for the

Waimate West water supply at or about (NZTM)

1694422E-5637449N

Expiry Date: 1 June 2023

Review Date(s): June 2018

Site Location: Rowan Road, Kaponga

Legal Description: Pt Sec 79 Blk X Kaupokonui SD

Catchment: Kaupokonui

Tributary: Mangawhero

Mangawheroiti

a. The consent holder shall pay to the Council all the administration, monitoring and supervision costs of this consent, fixed in accordance to section 36 of the Resource Management Act.

Special conditions

- 1. The rate of taking shall not exceed 121 litres per second [including any water that is taken from the Mangawhero Stream, in accordance with consent 0635, and discharged to the Mangawheroiti Stream].
- 2. No water shall be taken pursuant to this consent unless water is being concurrently taken from the Otakeho Stream at 85 litres per second. If, for a temporary period, the Otakeho Stream intake and diversion can not supply 85 litres per second, for example during maintenance, the consent holder shall immediately advise the Chief Executive, Taranaki Regional Council and this condition shall not apply.
- 3. Before exercising this consent the consent holder shall install, and thereafter maintain a water meter and datalogger. The water meter and datalogger shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of ± 5%. Records of the date, the time and the rate and volume of water taken at intervals not exceeding 15 minutes.

Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited lifespan.

- 4. The consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that water measuring and recording equipment required by the conditions of this consent ['the equipment']:
 - (a) has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - (b) has been tested and shown to be operating to an accuracy of \pm 5%.

The documentation shall be provided:

- (i) within 30 days of the installation of a water meter or datalogger;
- (ii) at other times when reasonable notice is given and the Chief Executive, Taranaki Regional Council has reasonable evidence that the equipment may not be functioning as required by this consent; and
- (iii) no less frequently than once every five years.
- 5. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 6. The water meter and datalogger shall be accessible to Taranaki Regional Council officers at all reasonable times for inspection and/or data retrieval.

- 7. The records of water taken shall:
 - (a) be in a format that, in the opinion of the Chief Executive, Taranaki Regional Council, is suitable for auditing; and
 - (b) specifically record the water taken as 'zero' when no water is taken.
- 8. The taking of water authorised by this consent shall be managed to ensure that the flow in the Mangawheroiti Stream, immediately downstream of the intake, is not less than 32 litres per second.
- 9. When the flow in the Mangawheroiti Stream is less than 500 litres per second the consent holder shall measure and record the flow of the Mangawheroiti Stream that passes downstream the intake to an accuracy of $\pm 10\%$ at intervals not exceeding 30 minutes.
- 10. From a date no later than 30 June 2012, the measurements made in accordance with conditions 3 and 9 of this consent, in a format to be advised by the Chief Executive, Taranaki Regional Council, shall be transmitted to the Taranaki Regional Council's computer system to maintain a 'real time' record of the water taken and the flow past the intake, with a delay of no more than 2 hours.
- 11. The consent holder shall ensure that a staff gauge is installed and maintained to effectively display the water level at the weir to an accuracy of 0.005 m at all times when the flow is less than 500 litres per second.
- 12. If necessary to comply with condition 9, the consent holder shall ensure that sufficient stream flow measurements are undertaken to maintain a 'rating curve' that accurately translates the water level to stream flow over the weir.
 - Note: Work required by special condition 12 may be undertaken by the Taranaki Regional Council and all reasonable costs recovered from the consent holder through the annual compliance monitoring programme that is in place for the activity.
- 13. At all times the consent holder shall adopt the best practicable option to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of water, including, but not limited to, the efficient and conservative use of water.
- 14. The consent holder shall, on an annual basis, provide a report detailing:
 - the work done to detect and minimise leaks within each of the areas supplied;
 - water use efficiency and conservation measures undertaken and planned for all users of the Waimate Water Supply Scheme area; and
 - water use benchmarking data for the region compared to water use for the Waimate Water Supply Scheme.

The report[s] shall be provided to the Chief Executive, Taranaki Regional Council before 1 September each year and cover the previous 1 July to 30 June period. The first report shall be provided by 1 September 2011.

Consent 0634-3

- 15. The consent holder shall make five annual payments of \$30,600 [GST exclusive] to the Taranaki Regional Council as a financial contribution in order to remedy or mitigate adverse effects on the environment. These payments shall be made no later than 1 September each year from 2011 to 2015.
- 16. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2018, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

For General, Standard and Special conditions pertaining to this consent please see reverse side of this document

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The volume of water taken in any 24 hour period ending at midnight shall not exceed 432 m³.
- 2. All bores shall be easily identifiable by permanent labels, which may be welded or engraved on the casing, or on the equivalent fixed part of the well construction or associated building. The numbering on the label shall be the bore number assigned by the Taranaki Regional Council (GND2511).
- 3. The bore shall include a conduit (or 'dip tube') no less than 30 mm in diameter that provides unimpeded access for measuring the water level within the bore. The conduit shall have an easily removable cap that prevents contaminants entering it.
- 4. The consent holder shall install, and thereafter maintain a water meter and a datalogger at the site of taking (or a nearby site in accordance with Regulation 10 of the Resource Management (Measurement and Reporting of Water Takes) Regulations 2010). The water meter and datalogger shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of \pm 5% at intervals not exceeding 15 minutes.

Note: Water meters must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters have a limited lifespan.

- 5. The records of water taken shall:
 - a) be in a format that, in the opinion of the Chief Executive, Taranaki Regional Council, is suitable for auditing;
 - b) specifically record the water taken as 'zero' when no water is taken; and
 - c) be transmitted to the Taranaki Regional Council's computer system within 2 hours of being recorded.
- 6. The consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that water measuring equipment required by the conditions of this consent ('the equipment'):
 - a) has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - b) has been tested and shown to be operating to an accuracy of \pm 5%.

the documentation shall be provided:

- i) within 30 days of the installation of a water meter;
- ii) at other times when reasonable notice is given and the Chief Executive, Taranaki Regional Council has reasonable evidence that the equipment may not be functioning as required by this consent; and
- iii) no less frequently than once every five years.

Consent 10370-1.0

- 7. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 8. The water meters and data loggers shall be accessible to Taranaki Regional Council officers at all reasonable times for inspection and/or data retrieval.
- 9. At all times the consent holder shall take all practicable steps to take and use water efficiently and generally prevent or minimise any adverse effects on the environment including as minimum, by ensuring that the minimum amount of water necessary for the purpose is taken.
- 10. The consent holder shall ensure that the bores and associated pipework are designed and configured in such a way that no water from any source can re-enter any bore.
- 11. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2020 and every three years thereafter, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

- a) On receipt of a requirement from the Chief Executive, Taranaki Regional Council the consent holder shall, within the time specified in the requirement, supply the information required relating to the exercise of this consent.
- b) Unless it is otherwise specified in the conditions of this consent, compliance with any monitoring requirement imposed by this consent must be at the consent holder's own expense.
- c) The consent holder shall pay to the Council all required administrative charges fixed by the Council pursuant to section 36 in relation to:
 - i) the administration, monitoring and supervision of this consent; and
 - ii) charges authorised by regulations.

Special conditions

- 1. The consent holder shall at all times adopt the best practicable option, as defined in section 2 of the Resource Management Act 1991, to prevent or minimise any adverse effects on the environment from the exercise of this consent.
- 2. The exercise of this consent shall be undertaken generally in accordance with the documentation submitted in support of application 3452. In the case of any contradiction between the documentation submitted in support of application 3452 and the conditions of this consent, the conditions of this consent shall prevail.
- 3. The discharge shall not exceed 6 cubic metres per day, at a rate not exceeding 5 litres per second.
- 4. The discharge quality shall not exceed the following limits at all times:

Component	Concentration
free available chlorine	$<0.1g/m^3$
suspended solids	20 g/m^3
pН	6.5-8.5

- 5. The consent holder shall properly and efficiently maintain and operate the settling pond so as to meet the conditions of this consent.
- 6. After allowing for reasonable mixing, within a mixing zone extending 20 metres below the discharge point, the discharge shall not give rise to any of the following effects in the unnamed tributary of the Mangawhero Stream:
 - (a) the production of any conspicuous oil or grease films, scums or foams, or floatable or suspended materials;
 - (b) any conspicuous change in the colour or visual clarity;
 - (c) any emission of objectionable odour;
 - (d) the rendering of fresh water unsuitable for consumption by farm animals;
 - (e) any significant adverse effects on aquatic life, habitats, or ecology.

Consent 4446-2

- 7. This consent shall lapse on the expiry of five years after the date of issue of this consent, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 8. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2011 and/or June 2017, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The consent holder shall maintain the weir so that it remains sound and fit for purpose.
- 2. The consent holder shall repair any erosion or scour of the river bed or banks caused by the weir and take reasonable steps to stop it recurring.
- 3. The structure authorised by this consent shall not restrict fish passage.
- 4. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2023 and/or June 2029, for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The combined total volume of water taken from the 'Fookes Street' bore (GND0244), the 'Chester Street' bore (GND0059) and the 'Swinbourne Street' bore (GND2242) shall not exceed 900 cubic metres per day and the combined rate shall not exceed 14.2 litres per second.
- 2. The daily maximum take volume and abstraction rate from each individual bore shall not exceed the limits specified below:

Production bore ID	Maximum daily abstraction volume (cubic metres per day)	Maximum daily abstraction rate (litres per second)
Fookes Street (GND0244)	500	7.2
Chester Street (GND0059)	400	7.0
Swinbourne Street (GND2242)	890	10.3

- 3. The bores shall be easily identifiable by permanent labels, which may be welded or engraved on the casing, or on the equivalent fixed part of the well construction or associated building. The label shall show the bore number assigned by the Taranaki Regional Council (GND0244 at Fookes Street, GND0059 at Chester Street and GND2242 at Swinbourne Street).
- 4. Prior to the exercise this consent the consent holder shall install, and thereafter maintain a water meter and a datalogger on each bore. The water meters and dataloggers shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of \pm 5%.
 - Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited life-span.
- 5. Prior to the commencement of abstraction from the Swinbourne Street production bore, the consent holder shall in each bore, install and subsequently maintain equipment approved by the Taranaki Regional Council to measure and record the water level within each bore.
- 6. The consent shall, for each bore, maintain an abstraction record, including the date and time of abstraction, instantaneous rate and cumulative abstraction volume. The consent holder shall also maintain a record of water level in each bore, at intervals not exceeding 15 minutes, and include the date and time of measurement. All records shall be made available to the Chief Executive, Taranaki Regional Council in an approved format, by 31 July each year or earlier upon request.

Consent 3313-3

- 7. Within 30 days of the installation of a water meter or datalogger, and upon request, the consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that:
 - a. water measuring or recording equipment required by the conditions of this consent has been installed and/or maintained in accordance with the manufacturer's specifications; and
 - b. water measuring or recording equipment required by the conditions of this consent has been tested and shown to be operating to an accuracy of \pm 5%.
- 8. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 9. At all times the consent holder shall adopt the best practicable option to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of groundwater, including, but not limited to, the efficient and conservative use of water.
- 10. The taking shall not cause the intrusion of salt water into any freshwater aquifer.
- 11. The consent holder shall ensure that there is access into the well that enables the measurement of static and pumping water levels.
 - Note: Compliance with this condition can be achieved with the existing wellhead configuration by allowing access to the well via the water level monitoring transducer installation tubing.
- 12. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2016 for the purposes of:
 - (a) ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time; and/or
 - (b) to require any data collected in accordance with the conditions of this consent to be transmitted directly to the Council's computer system, in a format suitable for providing a 'real time' record over the internet.

Grid Reference (NZTM) 1739933E-5589679N

Catchment: Unnamed Stream 3

a. The consent holder shall pay to the Taranaki Regional Council all the administration, monitoring and supervision costs of this consent, fixed in accordance with section 36 of the Resource Management Act 1991.

Special conditions

- 1. The total volume of water taken from the 'bore 2' (GND2224) shall not exceed 80 cubic metres per day at a rate not exceeding 1.5 litres per second.
- 2. The taking shall not cause the intrusion of saltwater into any freshwater aquifer.
- 3. The bores within the supply network shall be easily identifiable by permanent labels, which may be welded or engraved on the casing, or on the equivalent fixed part of the well construction or associated building. The numbering on the label shall be the bore number assigned by Taranaki Regional Council as follows:

Bore 1: GND1061 Bore 2: GND2224

- 4. Prior to exercising this consent the consent holder shall install, and thereafter maintain a water meter and a datalogger at the site of taking. The water meter and datalogger shall be tamper-proof and shall measure and record the rate and volume of water taken to an accuracy of \pm 5%.
 - Note: Water meters and dataloggers must be installed, and regularly maintained, in accordance with manufacturer's specifications in order to ensure that they meet the required accuracy. Even with proper maintenance water meters and dataloggers have a limited lifespan.
- 5. Within 30 days of the installation of a water meter or datalogger, and at other times when reasonable notice is given, the consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that:
 - a. water measuring or recording equipment required by the conditions of this consent has been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - b. water measuring or recording equipment required by the conditions of this consent has been tested and shown to be operating to an accuracy of \pm 5%.
- 6. Prior to exercising this consent the consent holder shall install water level monitoring devices in each bore (GND1061 and GND2224). The water level monitoring devices shall be accurate to \pm 0.05 metres and record levels at intervals not exceeding 15 minutes.

Consent 9563-1

- 7. Within 30 days of the installation of the water level monitoring devices, and at other times when reasonable notice is given, the consent holder shall provide the Chief Executive, Taranaki Regional Council with a document from a suitably qualified person certifying that:
 - a. water level monitoring devices required by the conditions of this consent have been installed and/or maintained in accordance with the manufacturer's specifications; and/or
 - b. water level monitoring devices required by the conditions of this consent have been tested and shown to be operating to an accuracy of \pm 0.05 metres.
- 8. The water meter and datalogger shall be accessible to Taranaki Regional Council officer's at all reasonable times for inspection and/or data retrieval.
- 9. If any measuring or recording equipment breaks down, or for any reason is not operational, the consent holder shall advise the Chief Executive, Taranaki Regional Council immediately. Any repairs or maintenance to this equipment must be undertaken by a suitably qualified person.
- 10. The consent shall maintain an abstraction record, including the date and time of abstraction, instantaneous rate and cumulative abstraction volume. The consent holder shall also maintain a record of water level in each bore, at intervals not exceeding 15 minutes, and include the date and time of measurement. All records shall be made available to the Chief Executive, Taranaki Regional Council in an approved format, by 31 July each year or earlier upon request.
- 11. At all times the consent holder shall adopt the best practicable option (BPO) to prevent or minimise any actual or likely adverse effect on the environment associated with the abstraction of groundwater, including, but not limited to, the efficient and conservative use of water.
- 12. This consent shall lapse on 30 June 2018, unless the consent is given effect to before the end of that period or the Taranaki Regional Council fixes a longer period pursuant to section 125(1)(b) of the Resource Management Act 1991.
- 13. In accordance with section 128 and section 129 of the Resource Management Act 1991, the Taranaki Regional Council may serve notice of its intention to review, amend, delete or add to the conditions of this resource consent by giving notice of review during the month of June 2016 and/or June 2022 for the purpose of ensuring that the conditions are adequate to deal with any adverse effects on the environment arising from the exercise of this resource consent, which were either not foreseen at the time the application was considered or which it was not appropriate to deal with at the time.

Appendix II

Categories used to evaluate environmental and administrative performance

Categories used to evaluate environmental and administrative performance

Environmental performance is concerned with <u>actual or likely effects</u> on the receiving environment from the activities during the monitoring year. Administrative performance is concerned with the Company's approach to demonstrating consent compliance <u>in site operations and management</u> including the timely provision of information to Council (such as contingency plans and water take data) in accordance with consent conditions.

Events that were beyond the control of the consent holder <u>and</u> unforeseeable (that is a defence under the provisions of the RMA can be established) may be excluded with regard to the performance rating applied. For example loss of data due to a flood destroying deployed field equipment.

The categories used by the Council for this monitoring period, and their interpretation, are as follows:

Environmental Performance

High: No or inconsequential (short-term duration, less than minor in severity) breaches of consent or regional plan parameters resulting from the activity; no adverse effects of significance noted or likely in the receiving environment. The Council did not record any verified unauthorised incidents involving environmental impacts and was not obliged to issue any abatement notices or infringement notices in relation to such impacts.

Good: Likely or actual adverse effects of activities on the receiving environment were negligible or minor at most. There were some such issues noted during monitoring, from self-reports, or during investigations of incidents reported to the Council by a third party but these items were not critical, and follow-up inspections showed they have been dealt with. These minor issues were resolved positively, co-operatively, and quickly. The Council was not obliged to issue any abatement notices or infringement notices in relation to the minor non-compliant effects; however abatement notices may have been issued to mitigate an identified potential for an environmental effect to occur.

For example:

- High suspended solid values recorded in discharge samples, however the discharge was to land or to receiving waters that were in high flow at the time;
- Strong odour beyond boundary but no residential properties or other recipient nearby.

Improvement required: Likely or actual adverse effects of activities on the receiving environment were more than minor, but not substantial. There were some issues noted during monitoring, from self-reports, or during investigations of incidents reported to the Council by a third party. Cumulative adverse effects of a persistent minor non-compliant activity could elevate a minor issue to this level.

Abatement notices and infringement notices may have been issued in respect of effects.

Poor: Likely or actual adverse effects of activities on the receiving environment were significant. There were some items noted during monitoring, from self-reports, or during investigations of incidents reported to the Council by a third party. Cumulative adverse effects of a persistent moderate non-compliant activity could elevate an 'improvement required' issue to this level. Typically there were grounds for either a prosecution or an infringement notice in respect of effects.

Administrative performance

High: The administrative requirements of the resource consents were met, or any failure to do this had trivial consequences and were addressed promptly and co-operatively.

Good: Perhaps some administrative requirements of the resource consents were not met at a particular time, however this was addressed without repeated interventions from the Council staff. Alternatively

adequate reason was provided for matters such as the no or late provision of information, interpretation of 'best practical option' for avoiding potential effects, etc.

Improvement required: Repeated interventions to meet the administrative requirements of the resource consents were made by Council staff. These matters took some time to resolve, or remained unresolved at the end of the period under review. The Council may have issued an abatement notice to attain compliance.

Poor: Material failings to meet the administrative requirements of the resource consents. Significant intervention by the Council was required. Typically there were grounds for an infringement notice.
