## **Resource Consent Application**

(Pursuant to section 88 of the Resource Management Act 1991)

### Discharge Permit To discharge contaminants to water or land

(A separate application form is required for each consent being applied for)

#### Important: Please read carefully before completing the form

All applicants need to respond to all of the questions. If a particular section is not applicable to your application, please say so; do not leave the question blank. Questions may be answered in attached documentation if it is more convenient or insufficient space is provided on the form. If that is done, state specifically on the application form where the answer can be found **(include page numbers if referring to a separate report).** 

If you have any questions relating to completion of this application form, please contact the Consents Department, Taranaki Regional Council on telephone (06)765-7127 or email <u>consents@trc.govt.nz</u>.

# Lodge the application by signing below and sending the completed form to:

Mail: Taranaki Regional Council, Private Bag 713, Stratford 4352. Attention: Consents Administration Officer

Email: <u>consents@trc.govt.nz</u> (if application is emailed please do not mail a hard copy unless requested to do so by the consents department.)

If you have not received an email acknowledgement for this application within 5 working days (for new applications) or 10 working days (for renewals) please contact <u>consents@trc.govt.nz</u>.

Application is hereby made	e for the resource conser	nt detailed in this form
Signature of applicant or author	prised agent:	<u>.</u>
Name: Mr Stephen O'Sullivan		Date: <u>27-02-2020</u>
Please print full name of person who signed a	above.	

### 1 Application Purpose

1.1	What is the purpose of this applicat	ion?		
	New consent	₫		
	Replacement for expiring consent (renewal)		Consent number of expiring consent	

Note: If you are applying to change the conditions of your consent, do not complete this form. You will need to complete form 510 instead.

### 2 Applicant Details

	Please complete either (a), (b) or (c) to whom consent is to be issued.
2.1	Applicant's name (full name of proposed consent holder)

(a) Company Opunake Power Ltd

		First Name	Middle I	Name	Surname
(b)	Individual(s)	Mr Stephen O'Sul	livan		
(c)	Trust/Partners	hip Name			
	If Trust/Partner	ship: Full names of Trust	ees/Partners:		
	First Name		Middle Name	Surname	
2.2	Applicant's ad	dress for service [not c	onsultant's address]		
	E-mail steve.	osullivan@xtra.co.nz			
	Postal Opuna	ake Power Ltd c/o13	Verona Place, Strat	ford	
	Phone		Mob.	0274474555	
	Name of perso	on to contact regarding	this application		
	Contact Perso	n			
	Phone		Email.		
	(if diff	erent from 2.2)		(if different from 2	2.2)

2.3 Address for service (*if different from above, i.e. consultant, lawyer, or other person handling application*)

Contact	Person
Phone _	Mob
	The Council will serve all formal documents electronically via

the email address in 2.2 and 2.3 (if provided).

#### Site Details 3 No 🗹 Yes 🗖 Will the discharge occur in the Coastal Marine Area. 3.1 If you answered 'Yes' to the above, before lodging this application please contact consents Administration Staff at consents@trc.govt.nz to determine who you are required to seek comment from under the Marine and Coastal Area (Takutai Moana) Act 2011. 3.2 Name and address of owner or occupier at the site (if different from 2.1 and 2.2) Land is owned by the STDC and DOC as per documents previously supplied to the TRC the aplicant has a DOC lease and right to operate No 🗹 Yes 📮 Written approval of landowner(s) attached (See section 11) Location of activity (Including: Street/road name, number, and locality) 3.3 SH45 Opunake Waiaua river bridge Map Co-ordinates at point of discharge (either Longitude/Latitude or NZTM): 3.4 Longitude Latitude OR 1674400 5632077 E N (NZTM) 3.5 Legal description of property at site of activity (refer to land title or rates notice) SECT 48 SUBN OPUNAKE Assessment/Valuation number of property (refer to land title or rates notice)

#### 3.6 Assessment/Valuation number of property (*refer to land title or rates notice*) <u>1197025200</u>

3.7 If the discharge is to water, name the river or stream that the discharge goes to or for discharges to land the name of the closest river or stream to the discharge site? Lake Opunake

#### 4 Location map

4.1 The application must include an aerial photograph or clear map showing the location of the proposed discharges.

An aerial photograph of the site can be obtained free of charge from Taranaki Regional Explorer; <u>https://maps.trc.govt.nz/LocalMapsGallery/</u>. Alternatively, contact the Consents Department at the Council and request an aerial photograph to be provided.

Aerial photograph (or map) included

Please make sure the following is shown on your aerial photograph or map:

- Discharge points
- Catchment area
- Property boundaries
- Local Roads
- Any other relevant features

#### 5 Details of the Activity

- 5.1 If you have discussed this proposal with council staff, please give the person's name here: Fed McLay
- 5.2 In your own words, briefly describe the activity you are undertaking and its purpose:

Water is diverted from the Waiaua River and discharged to Lake Opunake, where it is used for hydroelectric generation. For the majority of the year, this activity will comply with permitted activity rule 21 of the Regional Freshwater Plan for Taranaki. However, at times water is diverted which contains elevated concentrations of suspended sediments and/or is discoloured (e.g. due to tannins), associated with elevated flows in the Waiaua River. It is for this activity that a resource consent is required, as it is likely that this discoloured water is discharged to a clean lake, resulting in discolouration of the lake

5.3 Indicate the consent being applied for on this form:

[please complete separate application forms for each type of consent applied for]

A)	Discharge of contaminants to land	Yes		No	
B)	Discharge of contaminants to water	Yes	$\mathbf{A}$	No	

5.4 Describe the industry and/or process from which the discharge will occur, and its general nature [eg domestic sewage, wastewater]

The contaminants are sourced from the Waiaua River, and as such are naturally
occurring (barring any pollution incidents upstream). They will mainly comprise
of either suspended solids (sand and silt, with some gravel) and tannins. Suspended solids
are typically highest on a rising flow in the river, while tannins are usually evident
on a receding flow. Note that the station has no tangible control over the nature of the
contaminants. Control is only maintained by manipulating the intake of water.
When the river is in flood, the Waiaua is diverted away form the lake intake, this is controlled
automatically by river level both rising and receding rivel levels

5.5 What is the general form of the discharge?

	Yes	No		Yes	No
Solid material			Liquids		
Generally solid but will release contaminants			Liquids with contaminants in suspension or solution	M	

5.6 Identify the potentially significant contaminants [or effects of contaminants] in the discharge

	Yes	No		Yes	No
Sediment	$\mathbf{\nabla}$		Phosphorus		
Heat			BOD		
Nitrogen			Hydrocarbons		
Other contaminants detailed below			Metals		

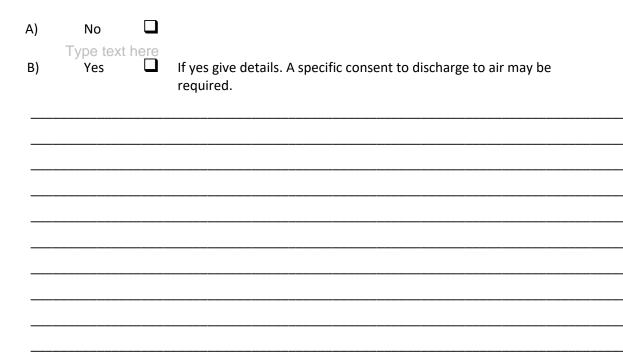

Type text here

### 6 Details of discharge to land

[please do <u>not</u> complete if discharge is to water]

- 6.2 Give full details of the source of the material discharged and any treatment it will receive prior to discharge

6.3 Could the discharge result in any emissions of odour or dust beyond the property boundary?

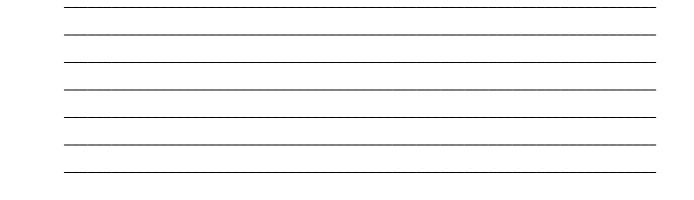

#### Solids:

6.4 Detail the volume proposed to be discharged and the frequency of discharge

_iquids:		
_iquids:		
	ed maximum rate	of dischargem <sup>3</sup> per
What is the propos		of dischargem <sup>3</sup> per
		of dischargem <sup>3</sup> per
What is the propos		of dischargem <sup>3</sup> per
What is the propos	e discharge	of dischargem <sup>3</sup> per If not constant state below:
What is the propos	e discharge <b>Yes No</b>	If not constant state below:
What is the propos	e discharge <b>Yes No</b>	

6.7 Give full details of the method of discharge.

#### 7 Details of discharge to water

[please do <u>not</u> complete if discharge is to land]

7.1 Give full details of the source of the discharge and any treatment it will receive prior to discharge

The Waiaua Catchment is subject to significant movement of sediment due to erosion
in the headwaters within Te Papakura o Taranaki. It includes significant volumes of
sand which is easily entrained and carried into the station intake. Some settlement of
sediment occurs within the canal (between the lake and intake) which can be returned
to the river through the canal sluice gate. However not all sediment settles within the
canal, and is carried through into Lake Opunake.
With regards to the tannins, no treatment is proposed. Tannins dissolve into the water
as it flows through organic material (peat, fallen leaves, etc). Being dissolved makes
treatment of this volume of water financially prohibitive.

#### Solids:

7.2 Detail the volume proposed to be discharged and the frequency of discharge.

The volume of sediment and tannins discharge to Opunake Lake is not quantifiable as their concentrations are dependent on the loadings within the river. However, it is proposed that the intake of water be managed so as to minimise the discharge of suspended sediment (but not tannins) to the lake.

#### Liquids:

7.3 What is the proposed maximum rate of discharge <u>3.9</u> m<sup>3</sup> per second

#### 7.4 How frequent is the discharge

Constant	Yes No	If not constant state below:
		hrs per day
		days per week other With the exception of managed gate closures

#### 7.5 Give full details of the method of discharge.

The discharge is controlled at the river intake gates. Water freely flows into Lake Opunake via the canal, with intergrated sand trap. It is proposed that the discharge be managed so that abstraction/discharge during high flows contaminated with suspended sediment is avoided.

This includes closing and opening the intake when the flow river is above a pre-determined river level (e.g. 3x median flow). At times the rate of flow may increase faster than the control system can respond as there is inherent time delays, so some leniency is required, but the issue of tannin stained water happens when the river level drops and the gates atomatically open, the river water may be stained.

The general operation of the scheme tries to minimise the solid contaminats by regular flushing of the gate 5 clearing out sand and silt before entering the intake canal

7.6 Give any other relevant details about the rate and frequency of discharge.

#### 8 Assessment of Environmental Effects

An assessment of environmental effects [AEE] in accordance with schedule 4 of the Resource Management Act 1991 must be provided with the application. The AEE detail must correspond to the scale of the effects that the activity may have on the environment.

Completing the AEE section of this form will be adequate for most applications. However for activities with actual or potential effects that are significant, a separate comprehensive AEE report including specific investigations may be required.

Schedule 4 can be viewed at www.trc.govt.nz/resource-consent-application-forms

- Consideration of alternative methods of discharge, including discharging to another receiving 8.1 environment.
  - A)

M

No alternatives considered. This is the only feasible option. Explain below if appropriate; or

B) Provide a description of alternatives considered and the reasons for the option chosen

There are no alternatives, as the scheme is reliant on the Waiaua River flow. However there is potential to manage the discharge, so as to reduce the volume of sediment carried into the lake.

8.2 If the application is to renew a consent, summarise the monitoring that has been undertaken and the environmental effects as identified by that monitoring.

Although this is for a new consent, the activity has occurred previously under the permitted activity rule. For much of the time, there are no discernible effects from the discharge. However, from time to time there has been discolouration caused when flood flow from the river. enters the lake. This is the most obvious impact of the discharge when it is occurring There is also aggradation of sediment in the lake, reducing the amount of lake available for boating. However, this can also result in a positive effect by providing a delta for waterfowl foraging. Birds that have been observed on this delta include mallards, shovellers, black swan, paradise shelduck, canadian geese, pied stilt, royal spoonbill and godwit. The aggradation of sediment represents a gradual impact, in that it takes a significant number of courences to cause an impact However, it is likely that this is the most important effect from a stakeholder perspective.

Type text here here is also potential for sediment to impact biological processes, such as macrophyte photosynthesis, zooplankton & fish feeding, phytoplankton production and benthic invertebrate production. However, the duration of the contaminated discharge is likely to be short due to the proposed management regime, and therefore unlikely to significantly impact on the biological communities. Sediment input into lakes is not an unusual phenomenon OR

New Consent/No monitoring data

- 8.3 Provide an assessment of the effects on the environment, including with particular reference to:
  - the contaminants identified in Question 5.6
  - any effects on soil
  - any effects on groundwater
  - any likely change in the colour or clarity of receiving water
  - distance away that any effects are likely to be noticeable
  - any erosion/scour effect of the discharge
  - any effects on ecology, amenity or maori cultural values

Also identify any coastal features in the vicinity: archaeological sites of significance, surf breaks, significant surfing areas, sites of significance to Maori, reefs, marine reserves and marine protected areas. Their locations are shown at:

https://maps.trc.govt.nz/LocalMapsViewer/?map=14083dae18734b83a3a7a0fc51b34283

Specifically consider the environmental effects on these features.

Much of the requested detail is described in section 8.2

Impacts on cultural values have not been assessed. It is likely that this will occur in conjunction with the other consents which have been applied for.

An assessment of the activity against the matters set out in Part 2 of the RMA and against any relevant provisions of policy documents and regulations must be provided with the application. The assessment must be in sufficient detail to satisfy the purpose for which its required.

For most applications the brief assessment provided below will be adequate. However for activities with significant policy implications, or where a National Policy Statement is relevant, a specific more comprehensive assessment is likely to be required.

The proposal is consistent with Part 2 of the RMA (the focus of which is to promote sustainable management of natural resources). The Regional Freshwater Plan for Taranaki generally supports discharges to water or land if adverse effects such as those associated reduced water quality are avoided, remedied or mitigated. These requirements can be met by appropriate treatment and/or adopting the best practicable option to minimise effects.

I will adopt the RMA assessment above; or

I will attach an alternative assessment

#### **10 Other Consents Required**

10.1 What consents are required from other authorities for the proposed activity?

None				
	Consent Required	Authority	Applied	l for?
			Yes 🗖	No 🗖
			Yes 🗖	No 🗖
			Yes 🗖	No 🗖

10.2 What other consents are required from the Taranaki Regional Council for the proposed activity? A separate application form for each activity must be completed.

None			
	Consent Required	Applied	l for?
As alr	eady applied for	Yes 🗖	No 🗖
		Yes 🗖	No 🗖
		Yes 🗖	No 🗖

#### 11 Consultation / Affected Parties

11.1 Please list the persons that you believe to have an interest in or that may be affected by the proposal.

Name	Address	Phone
As per detail provided ir	o other applications	
·····		

11.2 Detail the consultation undertaken with any interested/affected parties, and the views of those consulted. Attach correspondence if appropriate. The consultation undertaken and the information provided is to aid the Council in determining who may be adversely affected by the proposal.

If the discharge is in the coastal marine area please provide details of consultation with people/organisations who have made applications for customary rights under the Marine and Coastal Area (Takutai Moana) Act 2011. Include how you consulted, who you consulted with and their response.

As per detail provided in other applications

Please note: Council may determine that your application is to be notified. But generally it will be non-notified if there are no more than minor adverse effects beyond the adjacent land, and if written approval is obtained from all those people who are likely to be adversely affected in a minor or more than minor way. Council will determine the people who are likely to be adversely affected and you will have the option of obtaining their written approval so that your application can be non-notified.

#### Important Note:

If you are not the landowner at the site of the discharge, the landowner(s) written approval will be required. If they are not included with the application it will be lodged as a draft. Formal acceptance will occur when all written approvals are provided or the applicant requests limited notification.

### 12 Draft report and conditions

12.1 Do you wish to review and make comment on a draft report and recommendation [including consent conditions] before any consent is issued?

No 🗖

If you answered 'Yes' please consider agreeing to a timeframe extension [See section 13 below.]

### 13 Processing Timeframes

The RMA specifies timeframes for processing resource consent applications, [for example 20 working days for a non-notified application], however these timeframes can be extended with the applicant's agreement.

13.1 Do you agree to the Taranaki Regional Council extending RMA consent processing timeframes?

Yes, provided that I can continue to exercise my existing consent until processing of this application is completed [renewal applications].

Yes, provided that the extension is for the specific purpose of discussing and trying to agree on consent conditions.

Yes, provided that the application process is completed before \_\_\_\_/\_\_\_\_/\_\_\_\_ [enter date]

#### 14 Value of investment (renewal applications)

Please complete this section only if your application is to renew an existing consent

14.1 Provide an assessment of the value of your investment that is dependent on this consent.

#### 15 Surrender of existing consent [renewal applications only]

Please note that your existing consent is to be surrendered on the granting of this application.

### 16 Fees and charges

### **Official information**

The information you provide with your application is official information. It is used to help process your resource consent application and assess the impact of your activity on the environment and other people.

Your information is held and administered by the Taranaki Regional Council in accordance with the Local Government Official Information and Meetings Act 1987 and the Privacy Act 1993. This means that your information may be disclosed to other people who request it in accordance with the terms of these Acts. It is therefore important you let us know if your application includes trade secrets, commercially sensitive material or any other information you consider should not be disclosed.

# Please lodge the application by signing the front page and sending the completed form to:

Mail: Taranaki Regional Council, Private Bag 713, Stratford 4352. Attention: Consents Administration Officer

Email: <u>consents@trc.govt.nz</u> (if application is emailed please do not mail a hard copy unless requested to do so by the consents department.)
